QUESTION 1

An IT organization has hired you as a cloud architect to assist them in planning for cloud services. Your first goal is to help the IT organization categorize existing services against service characteristics. You have provided a table that shows common service characteristics and their attributes for considerations, benefits, and trade-offs.

The following attributes from the table have been identified: -Consideration standardized service contracts and metadata definitions -Benefit: development and implementation cost reduction -Tradeoff: very finite capability

What characteristics correspond to the identified attributes?

A. Loosely Coupled, Composable, and Autonomy

B. Discoverable, Reusable, and Autonomy

C. Idempotent, Composable, and Discoverable

D. Idempotent, Loosely Coupled, and Reusable

Correct Answer: A

QUESTION 2

A health insurance company that operates solely within one country decides to adopt newer technologies to offer products and features more quickly to customers. They ask the IT organization to plan for deploying cloud services to help with this strategy.

As a cloud architect on the IT team, what should be your most important deployment consideration?

A. Lowest cost

B. Global access

C. GRC and Security

D. High performance

Correct Answer: C

QUESTION 3

A company wishes to transform to using cloud services. They have a good understanding of Service Oriented Architecture (SOA), but have not established the needed education, teamwork, and discipline to take them through the full ITaaS implementation.

As their cloud architect consultant, you need to take them to the next level in the service orientation maturity model. What is the next level?

A. Service Aligned

B. Service Capable

C. Service Aware

D. Self-Service

Correct Answer: C

QUESTION 4

In a hypothetical future scenario, a CEO wants real-time market sentiment and performance reports displayed on smart watches and neural-optical data implants of all C-level and E-level corporate employees. The CEO also wants the corporation\'s intelligent lighting system to change color depending on current sentiment and performance data. Currently the corporation has no real-time market reporting capability.

What emerging 3rd Platform technologies enable the desired capabilities?

A. Big data analytics, augmented humans, and Internet of Things

B. Augmented humans, Internet of Things, and sensor networks

C. Internet of Things, sensor networks, and big data analytics

D. Sensor networks, big data analytics, and augmented humans

Correct Answer: D

QUESTION 5

The operations department of a major hosting provider is under pressure to deliver services more quickly. They have a large number of tools for managing IT technologies across the data center. Although investments in virtualization and automation have been made, it still takes months to provision basic IT services to meet new customer demands. Hence, the provider is considering offering cloud services.

What is a key focus area for driving higher operational efficiency and associated profits?

A. Re-design and strengthen the architecture to ensure that the components within the data center are modular and can be reused

B. Deliver customer services derived from an approved set of standardized service templates, establish change control to manage the life cycle of the templates

C. Provide a custom capability for each customer based on analysis of the application architecture; use shared services where possible

D. Deliver custom services using automation tools, apply change control to the tools to minimize change; develop reusable components to build environments

Correct Answer: D
