QUESTION 1

An enterprise is beginning its journey to ITaaS. An assessment of their current environment has already been completed. It has been determined that a change made -- even to a small part of the infrastructure -- requires the entire monolith to be rebuilt and deployed. As a cloud architect, what would you use to redesign the monolith to resolve this issue?

- A. Highly modular, component based suite of services
- B. Tightly coupled, services architectural style
- C. Tightly integrated, open architectural style
- D. Highly modular, monolithic architectural style

Correct Answer: A

QUESTION 2

A company is in the process of using APIs for their SaaS offering which are provided by a social media services provider. Which type of APIs are these?

- A. Infrastructure
- B. Provisioning
- C. Configuration
- D. Application

Correct Answer: D

QUESTION 3

An IT organization has hired you as a cloud architect to assist them in planning for cloud services. Your first goal is to help the IT organization categorize existing services against service characteristics. You have provided a table that shows common service characteristics and their attributes for considerations, benefits, and trade-offs.

The following attributes from the table have been identified:

Consideration: bundling services increases complexity
Benefit: replaceable components, improved recovery from failure
Trade off: very finite capability

What characteristics correspond to the identified attributes?

- A. Discoverable, Composable, and Idempotent
- B. Discoverable, Reusable, and Autonomy
- C. Composable, Loosely Coupled, and Autonomy

D. Idempotent, Loosely Coupled, and Reusable

Correct Answer: C

QUESTION 4

A large IT organization has committed to transition to ITaaS. What changes would need to happen in the IT organization to adopt this model?

- A. IT organization would move from a strategic business partner to a cost center view
- B. All the products and services would be delivered by the lines of business (LOBs)
- C. New service related roles and responsibilities would emerge to support the model
- D. Business users would acquire services that meet their needs quickly only through IT

Correct Answer: C

QUESTION 5

An IT organization in a technology company is in the process of adopting cloud services in an ITaaS model. They are seeking to reduce their operating costs while delivering business aligned services. What is the most effective way to do so?

- A. Implementing automation in delivery of services
- B. Increasing utilization by encouraging multi-tenancy
- C. Implementing a service catalog and enabling self-service
- D. Aligning IT staff with lines of business to ensure agreement with business objectives

Correct Answer: A
