QUESTION 1

Create a file called requirements.yml /home/sandy/ansible/roles in a file called role.yml in /home/sandy/ansible/. The haproxy-role should be used on the proxy host. And when you curl http://node3.example.com it should display "Welcome tonode4.example.com" and when you curl again "Welcome tonode5.example.com"The php-role should be used on the prod host.

Correct Answer:

See the for complete Solution below. Solution as:

```
- name: install haproxy and php roles
  hosts: all
  vars:
    haproxy_backend_servers:
    - name: web1
        address: node4.example.com
    - name: web2
        address: node5.example.com
  tasks:
    - name: import haproxy
      include_role: haproxy-role
      when: "proxy" in group_names
    - name: import php
      include_role: php-role
      when: "prod" in group_names
```

Check the proxy host by curlhttp://node3.example.com

QUESTION 2

Which keywords will cause a role to be applied in a playbook? (Choose all that apply.)

A. use_role

B. include_role

C. load_role

D. role

Correct Answer: BD

The import_role keyword dynamically includes a role within a play. The role keyword statically includes a role within a play.

QUESTION 3

Why is it important to create a namespace for role variables?

A. Roles only have access to variables in their own namespace.

B. It is not really important.

C. Ansible requires namespaces to be set for a role and will error without them.

D. Namespacing role variables helps avoid conflicts with variables defined outside of the role.

Correct Answer: D

Because roles share variables and because plays can have variables defined outside of the role, namespacing role variables ensures that you are getting the variable you expect to get.

QUESTION 4

Create a file called packages.yml in /home/sandy/ansible to install somepackages for the following hosts. On dev, prod and webservers install packages httpd, mod_ssl, and mariadb. On dev only install the development tools package. Also, on dev host update all the packages to the latest.

Correct Answer:

See the forcomplete Solution below. Solution as:

```
---

- name: install pack
  hosts: dev,test,webservers
  become: true
  tasks:
    - name: install on all hosts in this play
      yum:
        name:
          - httpd
          - mod_ssl
          - mariadb
        state: latest
    - name: install on dev only
      yum:
        name:
          - '@Development tools'
        state: latest
      when: "dev" in group_names
```

** NOTE 1 a more acceptable answer is likely \'present\' since it\'s not asking to install the latest

state: present

** NOTE 2 need to update the development node

-name: update all packages on developmentnode

 yum:

name: \\'*\\'

 state: latest

QUESTION 5

What is a typical use case for an Ansible Template?

A. Managing remote system configuration files

B. Defining a host group

C. Installing remote Ansible installations

D. Running remote commands

Correct Answer: A
