QUESTION 1

Which of the following is a reliable way to test backed up data?

- A. Verify the file size of the backup
- B. Confirm the backup service is running at the proper time
- C. Compare data hashes of backed up data to original systems
- D. Restore the data to a system

Correct Answer: D

QUESTION 2

What is a zero-day attack?

- A. An attack that has a known attack signature but no available patch
- B. An attack that utilizes a vulnerability unknown to the software developer
- C. An attack that deploys at the end of a countdown sequence
- D. An attack that is launched the day the patch is released

Correct Answer: B

QUESTION 3

An organization has implemented a control for Controlled Use of Administrative Privilege. The control requires users to enter a password from their own user account before being allowed elevated privileges, and that no client applications (e.g. web browsers, e-mail clients) can be run with elevated privileges. Which of the following actions will validate this control is implemented properly?

- A. Check the log entries to match privilege use with access from authorized users.
- B. Run a script at intervals to identify processes running with administrative privilege.
- C. Force the root account to only be accessible from the system console.

Correct Answer: B

QUESTION 4

Which of the following can be enabled on a Linux based system in order to make it more difficult for an attacker to execute malicious code after launching a buffer overflow attack?

- A. ASLR

- B. Tripwire
- C. SUID
- D. Iptables
- E. TCP Wrappers

Correct Answer: A

QUESTION 5

To effectively implement the Data Protection CIS Control, which task needs to be implemented first?

- A. The organization's proprietary data needs to be encrypted
- B. Employees need to be notified that proprietary data should be protected
- C. The organization's proprietary data needs to be identified
- D. Appropriate file content matching needs to be configured

Correct Answer: C
