QUESTION 1

About linkage between an eSpace Desktop and an IP phone, which of the following statements are CORRECT?
(Multiple Choice)

- A. An eSpace Desktop can be bound to only one IP phone. After the binding, they share the same number.
- B. After an IP phone and an eSpace Desktop are linked, they both show the talking status when either of them is engaged in an ongoing call.
- C. After linkage is enabled, both the eSpace Desktop and IP phone can be connected at the same time.
- D. The eSpace Desktop and the linked IP phone can register with different U1900 models.

Correct Answer: AB

QUESTION 2

In the disaster recovery scenario, when the primary node is faulty, which of the following statements are CORRECT?
(Multiple Choice)

- A. On the standby node, you can run the `show connectstates stationtype primaryserver` command to query the connection status between the primary and standby nodes.
- B. The status of the connection to the primary node is displayed as disconnected on the standby node.
- C. On the standby node, you can run the `show workstatus` command to query the working status of the primary node.
- D. The working status of the standby node is Deactivate.

Correct Answer: AB

QUESTION 3

In a multi-node centralized network, which of the following statements are CORRECT if the central node is disconnected from a local node? (Multiple Choice)

- A. The local node becomes an independent IP PBX and accepts registration requests from SIP users.
- B. On the central node, the status of the local node's users is displayed as FAULT.
- C. On the central node, the local node's license information is not displayed.
- D. On the central node, the local node's license information is still displayed.

Correct Answer: ABC

QUESTION 4
