QUESTION 1

U1900 series unified gateways are deployed in redundancy mode in an enterprise. One day, a communication fault occurs, so all users cannot make voice calls. The cause of the fault is that the active gateway breaks down, but the standby gateway does not take over services from the active gateway. In this case, which of the following methods is the most suitable?

A. Check whether the standby gateway is normal, and manually switch to the standby gateway to recover services.

B. Locate the fault that causes the failure of the two-node cluster switchover after the active gateway is faulty.

C. Locate the fault that causes the active gateway breakdown.

Correct Answer: A

QUESTION 2

AR series enterprise routers are the next-generation routing and gateway devices that provide routing, switching, wireless, voice, and security functions. AR series gateways function as integrated branch access gateways in the eSpace UC solution network.

A. TRUE

B. FALSE

Correct Answer: A

QUESTION 3

A UC account is added on the BMU, and UC services are disabled and a service number is bound to this account. About this account, which of the following statements are CORRECT? (Multiple Choice)

A. This account can be used to log in to an eSpace client and make voice calls.

B. This account can be used to log in to an eSpace client and send instant messages.

C. A common terminal can use the service number for registration.

D. This account can be used to log in to the BMU for configuring and managing the One Number Link You (ONLY) service.

Correct Answer: CD

QUESTION 4

The process for configuring outgoing calls on an AR router at a branch node is as follows: first configure the call route, then the prefix or trunk group, and last the trunk group or prefix. Which of the following is the logical process for the outgoing call route on the AR router?

A. callroute -> prefix -> trunk-group

B. prefix -> callroute -> trunk-group

C. callroute -> trunk-group -> prefix

D. prefix -> trunk-group -> callroute

Correct Answer: B

QUESTION 5

In the eSpace UC solution, DC service data that needs to be backed up includes recording files, CDR files, and database data;

A. TRUE

B. FALSE

Correct Answer: A
