QUESTION 1

About SBC networking, which of the following statements is INCORRECT?

- A. An SBC supports IP-based communication between the carrier networks and voice access devices, and between the headquarters and branches of an enterprise.
- B. An SBC processes and controls data streams between IP networks in real time to support VoIP service implementation.
- C. Generally, firewalls can convert only Layer 3 and Layer 4 headers. For UC applications such as SIP and H.323, the IP addresses required for exchanging signaling and media streams are contained in the packet payload; therefore, firewalls cannot perform NAT for private IP addresses at the application layer.
- D. On the terminal, the SIP server address configured is the SBC address. The SBC functions as the signaling proxy, and media streams do not pass through the SBC.

Correct Answer: D

QUESTION 2

In the eSpace UC solution, UC service data that needs to be backed up includes recording files, CDR files, and database data;

- A. TRUE
- B. FALSE

Correct Answer: A

QUESTION 3

In a multi-node centralized network, which of the following statements are CORRECT if the central node is disconnected from a local node? (Multiple Choice)

- A. The local node becomes an independent IP PBX and accepts registration requests from SIP users.
- B. On the central node, the status of the local node's users is displayed as FAULT.
- C. On the central node, the local node's license information is not displayed.
- D. On the central node, the local node's license information is still displayed.

Correct Answer: ABC

QUESTION 4

About the local regeneration prefix on the local node(U1900), which of the following statements are CORRECT? (Multiple Choice)

- A. The call property of the local regeneration prefix is Local regeneration call.
- B. The call property of the local regeneration prefix is Local call.
- C. When you configure the local regeneration prefix, you need to configure the office route selection code.
- D. The local regeneration prefix is valid only when the local gateway works in local regeneration mode.

Correct Answer: AC

QUESTION 5

After a whitelist is configured on a U1900 series unified gateway, only users whose IP addresses are in the whitelist can log in to the unified gateway and modify configuration data;

- A. TRUE
- B. FALSE

Correct Answer: A
