QUESTION 1

The core of NAT mapping is the changing of the data packet header (sink IP address). ()

- A. TRUE
- B. FALSE

Correct Answer: B

QUESTION 2

Originally, MCU cascading involves one cascaded channel, which can transmit one channel of video stream. In a telepresence conference, the channel can transmit only the video for the pane in the center. After multi-channel cascading is supported, each level of MCU can transmit multiple channels of video streams and therefore can transmit all three panes in a telepresence conference, to improve user experience.()

- A. TRUE
- B. FALSE

Correct Answer: A

QUESTION 3

264 video pictures are divided into three types of frames: I-frame, P-frame, and B-frame. An P-frame is an intraframe coded picture. A I-frame is an interframe coded picture. ()
