QUESTION 1

MPLS uses LDP to provide different label distribution modes. Which of the following statements regarding LDP label distribution control modes are false? (Choose all that apply.)

- A. LDP label distribution can be controlled in ordered mode.
- B. In ordered mode, when an LSR is the origin of a route, it can send label mapping messages to the upstream router initiatively and does not need to wait for label mapping messages from the next hop LSR.
- C. LDP label distribution cannot be controlled in independent mode.
- D. In independent mode, an LSR cannot send label mapping messages to the upstream router before it receives label mapping messages from the next hop LSR.

Correct Answer: CD

QUESTION 2

Which of the following methods are supported by OSPF for delivering default routes? (Choose three.)

- A. Delivery by an ABR
- B. Delivery by a Backbone Router
- C. Forcible delivery
- D. Non-forcible delivery

Correct Answer: ACD

QUESTION 3

Which types of interfaces are supported by Huawei switches after the VLAN function is configured? (Choose three.)

- A. Access interface
- B. Trunk interface
- C. Hybrid interface
- D. Dialer interface

Correct Answer: ABC

QUESTION 4

Which of the following statements about VRRP are true? (Choose three.)

- A. VRRP determines the roles of routers (master or backup) in a virtual router based on their priorities.
- B. If a backup router works in non-preemption mode and has a higher priority than the master router, it will become the master router unless the master router fails.
- C. After a backup router in preemption mode receives a VRRP packet from the master router, it compares its priority with the priority carried in the VRRP packet. If its priority is higher than the priority of the master router, it preempts to be the master router; if not, it remains in the backup state.
- D. If two routers competing for the master router have the same priority, the router with a higher interface IP address becomes the master router.

Correct Answer: ACD

QUESTION 5

Which of the following statements about traffic policing are true? (Choose three.)

- A. Is used to limit the traffic transmission rate.
- B. Is used to color packets.
- C. Caches packets whose transmission rate exceeds the limit.
- D. Re-marks packets with priorities.

Correct Answer: ABD
