#### QUESTION 1

Which statement about port isolation configuration is false?

- A. Port isolation can be used for Layer 2 isolation.
- B. In port isolation mode, ports are isolated at Layer 2 but can communicate at Layer 3 by default.
- C. Before the port isolation function takes effect on an interface, the port isolation function must be enabled first.
- D. The port-isolate enable command can run in the system view.

Correct Answer: D

---

#### QUESTION 2

Which of the following statements are correct regarding intra-area route calculation of OSPF? (Choose two.)

- A. Every OSPF router only uses one Router LSA to describe local active link state for one area.
- B. Every OSPF uses more than one Router LSA to describe local active link state for one area.
- C. One Router LSA only describes one link.
- D. One Router LSA describes more than one link.

Correct Answer: AD

---

#### QUESTION 3

Which problems of the single spanning tree network can be solved by MSTP? (Choose three.)

- A. Some VLAN paths are unreachable
- B. Traffic cannot be load balanced.
- C. The secondary optimal path is selected.
- D. Improve the network reliability

Correct Answer: ABC

---

#### QUESTION 4

Which of the following statements about link aggregation are true? (Choose three.)

- A. Link aggregation can be performed in manual load balancing or LACP mode. In manual loading balancing mode, LACP is enabled; in LACP mode, LACP is enabled too.

B. In manual load balancing mode, all active member interfaces forward data and perform load balancing.

C. In static LACP mode, the creation of the Eth-Trunk and the addition of member interfaces to the Eth-Trunk are performed manually. Compared with link aggregation in manual load balancing mode, active interfaces in static LACP mode are selected by sending LACP Data Units (LACPDU).

D. In dynamic LACP mode, the creation of the Eth-Trunk, the addition of member interfaces, and the selection of active interfaces are performed based on LACP negotiation.

Correct Answer: BCD

---

#### QUESTION 5

OSPF supports two authentication modes: area authentication and interface authentication. The two authentication modes cannot be configured at the same time.

A. True

B. False

Correct Answer: B
