QUESTION 1

In Huawei FusionCompute, after enabling the automatic computing resource scheduling function, the reason for the migration of the virtual machine may be (multi-select)

- A. Windows virtual machine blue screen and processing policy is "HA virtual machine"
- B. An application running on a virtual machine crashes
- C. The administrator manually migrates according to the system prompt
- D. The system automatically migrates according to the scheduling policy

Correct Answer: ACD

QUESTION 2

The following incorrect description of the security group application scenario is

- A. By setting security group rules, you can control permissions on folders in the virtual machine
- B. By setting a security group rule, you can only allow remote login of virtual machines to specific IP addresses
- C. By setting security group rules, you can protect virtual machines from being accessed
- D. By setting a security group rule, you can make the virtual machine inaccessible to the FTP server

Correct Answer: A

QUESTION 3

The following Qos description about CPU and memory resources is incorrect.

- A. Memory resources QOS is used to ensure that business-critical virtual machines can get sufficient memory resources
- B. CPU shares and CPU reservations work only when each virtual machine competes for computing resources
- C. The CPU QoS of the virtual machine is used to ensure that the computing resources of the virtual machine are reasonably allocated
- D. Memory resource QoS can only be used after the memory reuse switch is enabled

Correct Answer: D

QUESTION 4

In Huawei FusionCompute, the administrator can view the DVS port to which the virtual machine is connected.

A. TRUE

B. FALSE

Correct Answer: B

QUESTION 5

Virtualization description is correct

A. VMM runs in Guest Machine

B. VMM runs directly on Host Machine

C. VMM runs on Guest OS

D. VMM runs on Host OS

Correct Answer: D
