QUESTION 1

Which of the following statements is incorrect about the scenario where one primary backup domain and multiple branch backup domains exist?

A. Multiple branch backup domains are integrated into a primary backup domain, allowing you to centrally view operation reports of each backup domain in the primary backup domain.

B. Each branch backup domain works independently. If a branch backup domain is disconnected from the primary backup domain, backup jobs of the branch backup domain are not affected.

C. The primary backup domain periodically collects metadata of branch backup domains. When the branch backup domain restores connection with the primary backup domain, the metadata transmission automatically restores.

D. After a remote client is registered with the primary backup domain as an unconfigured client, the client can be hidden and grouped.

Correct Answer: C

QUESTION 2

An enterprise wants data backup to consume only a small amount of storage space and a minimal backup window. In this case, which backup type is most recommended?

A. Full backup

B. Full backup + Cumulative incremental backup

C. Full backup + Differential incremental backup

D. Cumulative incremental backup + Differential incremental backup

Correct Answer: C

QUESTION 3

In Huawei OceanStor active-active disaster recovery solution, which of the following links can be used between data centers? (Multiple Choice)

A. GE-WAN links

B. Fibre Channel links

C. 10GE links

D. Private GE links

Correct Answer: BC

QUESTION 4

Huawei\\'s end-to-end active-active data center solution is divided into six logical layers, namely, storage, computing, application, network, transmission, and security layers. Which are key points in designing these layers? (Multiple Choice)

A. The security layer uses Huawei USG series to provide security protection functions such as FW and IDS for data centers.

B. The storage layer uses the FastWrite function to reduce two round trips to one for each standard write I/O, thereby improving the write performance.

C. The computing layer uses virtualization platforms such as FusionSphere and VMware to provide cross-data-center clustering, thereby enabling multiple mission-critical applications to run in active-active mode.

D. The transmission layer employs optimization approaches such as dispersion compensation to ensure the minimum latency on the transmission layer.

Correct Answer: ABCD

QUESTION 5

Which of the following statements is correct about the Huawei asynchronous remote replication for LUN?

1.

HyperReplication/A of the OceanStor V3 storage systems adopt the multi-time-segment caching technology.

2.

HyperReplication/A of the OceanStor V3 storage systems adopt the snapshot technology.

A. Statement 1 is false. Statement 2 is true.

B. Statement 1 is false. Statement 2 is false.

C. Statement 1 is true. Statement 2 is true.

D. Statement 1 is true. Statement 2 is false.

Correct Answer: D
