QUESTION 1

Which function is not supported by a backup service node?

A. To transfer data between the client and backup management node

B. To maintain the index information and index cache information about all jobs on the service node

C. To write the job index information and backup task into the media

D. To write backup software data and read recovery data

Correct Answer: A

QUESTION 2

Which of the following statements about LAN-free and Server-free backup networking is true? A. During data backup, Server-free generates a copy that will be mounted to the backup server.

A. Server-free backup networking can directly back up data to backup storage.

B. LAN-free backup networking does not affect production hosts.

C. The LAN-free data backup path is as follows: production storage > backup server > backup media;

Correct Answer: A

QUESTION 3

In data backup scenarios, which are characteristics of physical tape libraries? (Multiple Choice)

A. Data can be remotely stored in an offline manner for a long term.

B. The capacity scalability of a physical tape library is better than that of a disk system.

C. The backup and restoration performance is relatively low.

D. The management and maintenance costs are low.

Correct Answer: ABC

QUESTION 4

File-level deduplication is also known as single instance storage (SIS). Based on indexes, file-level deduplication checks and compares the attributes of a file that needs to be stored with those of files that have been stored. If the file has not been stored, file-level deduplication stores the file and updates indexes. Otherwise, file-level deduplication only stores the pointers that point to the existing file.

A. TRUE

B. FALSE

Correct Answer: A

QUESTION 5

Active-Active Solution is implemented based on HyperMetro.

A. TRUE

B. FALSE

Correct Answer: A
