QUESTION 1

A customer requires 60 TB of storage space available on an OceanStor V3 storage system to store service data. How many disks will be used if the customer installs 600 GB 15K RPM SAS disks and creates a pool with RAID 5 (8D+1P) using a low hot spare policy? (Select the closest number without considering the required data protection space.)

A. 100

B. 120

C. 140

D. 180

Correct Answer: C

QUESTION 2

Client 1 attempts to read file X from an OceanStor 9000, and node A responds to the read request. Which statements are true about the process of reading file x? (Choose two.)

A. If the system detects that node B has cached file X, client 1 can directly read the file from node B.

B. If the system detects that node B has cached file X, node A can directly read the file from node B.

C. After processing the file read request initiated by client 1, the system retains file X on both node A and node B.

D. If the system detects that node A has cached file X, only data of file X is cached on node A but the parity data is not cached on node A.

Correct Answer: BD

QUESTION 3

EXT3 is the third-generation extended file system commonly used in the Linux operating system. Which of the following statements is correct regarding the EXT3 file system?

A. block is composed of a number of consecutive areas, block number starting from 1, the overall number, grouping

B. Each i node corresponds to a 1GE file or folder, which stores the description file size, file storage location and other information

C. The block group consists of a number of consecutive blocks, the number within the block group is determined by the block size

D. The superblock stores the basic information about the EXT3 file system

Correct Answer: A

QUESTION 4

In a Huawei disaster recovery plan, in order to implement the one-click disaster recovery operation for Oracle applications, you must configure the recovery in Replciation Director Plan. What configuration actions do you need to do on the Replication Director side before configuring the recovery plan? (Multiple choice.)

A. Configure the protection group

B. Configure the protection strategy

C. Configure the site and register disaster recovery host

D. Find the LUNs used by Oracle and make policy protection for these LUNs

Correct Answer: ABC

QUESTION 5

Which of the following statements regarding the Huawei Oceanstor V3 hierarchical storage and Smart Cache is correct?

A. A client business IO load random read that accounts for more than 60% using SATA, SAS for staging storage, use SSD to do cache, so it will effectively reduce costs and improve random performance indicators

B. If hot spot data is scattered and changing rapidly, it is recommended to use tiered storage

C. If there are many SSDs and hotspots, Smart Cache is the best choice

D. If you have a small amount of SSD data, use a tiered storage disk for more utilization

Correct Answer: A
