### QUESTION 1

Which of the following is a description of the UltraPath multipath setting? (Multiple answers)

- A. The mode of operation of the array can be in-controller load balancing or inter-controller load balancing.
- B. Load Balancing Mode Including wheel training algorithm, the maximum queue depth algorithm, the maximum workload algorithm.
- C. After the connection is interrupted between the LUN home controller and the host, the host accesses the LUN through the peer controller. In this case, the over-trail software defaults the switched home controller of the LUN to the remote controller.
- D. When multipath detects a preferred controller failure recovery, the I / O is resumed immediately at the preferred controller by default.

Correct Answer: AC

---

### QUESTION 2

A customer plans to deploy three application systems on an OceanStor V3 storage system. The first is a service system that carries Oracle databases, and it requires high random read and write performance. The second is a mail system used to process daily mails. The third is a video system used to archive video files. Which SmartTier policy settings are correct for creating LUNs for each application system? (Multiple Choice)

A. Service system:

1.

Initial capacity allocation: Allocate from the performance layer first

2.

Data relocation policy: Lowest relocation

B. Mail system:

1.

Initial capacity allocation: Automatic allocation

2.

Data relocation policy: Automatic relocation

C. Video system:

1.

Initial capacity allocation: Allocate from the capacity layer first

2.

---

Data relocation policy: Automatic relocation

D. Video system:

1.

Initial capacity allocation: Allocate from the capacity layer first

2.

Data relocation policy: Lowest relocation

Correct Answer: ABC

---

### QUESTION 3

Which of the following description is correct about simpiana backup software snapshot? (Multiple choice.)

A. Pause the app before the snapshot, go to the hardware storage snapshot to trigger a common snapshot with application consistency.

B. Backup software snapshot function can automatically find the storage volume of the file system, database, mail system.

C. Background snapshots can be indexed to ensure application recovery and small particle recovery.

D. Snapshots backup can be offline, the backup server almost has no impact.

Correct Answer: ABCD

---

### QUESTION 4

When one of the nodes in the Huawei N8000 cluster fails, the service IP address of the node cannot be accessed. Which of the following methods can recover the affected services?

A. Restart the failed node

B. Use the other node's business IP access

C. Only manually switch the node's service IP to the remaining nodes

D. restart service

Correct Answer: BC

---

### QUESTION 5

In an active-active disaster recovery solution configured with inter-site FC switch connection. When the distance between sides exceeds \_\_\_\_\_ km, you need to configure long-distance transmission.

A. 1KM

B. 10KM

C. 25KM

D. 50KM

Correct Answer: B
