QUESTION 1

In two OceanStor unified storage arrays configured with remote replication, the optimal path for remote replication data transmission is:

- A. Host - "Linking Primary Array Controller -" Linking From Array Controller -> (Forwarding) Controller operating from a LUN
- B. Host - "Primary LUN Controller -" (Forwarding) Primary Device Controller for Linking - "Link from the array controller
- C. Host - Primary LUN Controller -> (Forwarding) Link Primary Fabric Controller - "Linking From Array Controller -"Hair) from LUn work controller
- D. Host - "Link-connected Primary Array Controller -" Link-connected slave array

Correct Answer: D

QUESTION 2

Which of the following is not true about the Huawei OceanStor 18000 Smart Matrix architecture:

- A. scale-out: storage resources on-demand expansion, increase the engine to achieve performance, linear increase in capacity
- B. Full Exchange: The use of PCIe1.0 full switching interconnect, providing sufficient switching bandwidth to meet the stringent performance requirements
- C. Inherent Load Balancing: The controller is alive and well-balanced load sharing to improve storage resource utilization
- D. Full redundancy: Redundancy of all components, intelligent switchover of component failures to meet stringent business continuity requirements

Correct Answer: B

QUESTION 3

Maintenance personnel discovered a storage fault indicator light. You log in to the management interface and found a RAID group failure and replaced the hard disk. In this process, the maintenance personnel used the following basic troubleshooting methods:

- A. Logical reasoning
- B. Phenomenon analysis method
- C. Replacement method
- D. Alarm Information Analysis

Correct Answer: D

QUESTION 4

The Redhat Linux Enterprise 6 cp command is used to complete the operating system data migration. What steps are needed to verify the transfer? (Multiple choice.)

- A. Check if the size of the migrated file is the same as the original data.
- B. Check if the number of documents corresponds to the original data
- C. Check if each file with read and write permissions corresponds to the original data
- D. Whether the time for reviewing the case file corresponds to the original data.

Correct Answer: ABC

QUESTION 5

Which of the following is incorrect regarding the Sompana oracle backup configuration?

- A. In the backup parameter settings "max open files" parameter defines the maximum number of files to be read in parallel per channel, which is the RMAN MAXOPENFILES parameter
- B. "Command line backup" and "Log Backup" select the storage strategy for the database and archive logs, both need to choose the same storage strategy
- C. The "data files per BFS" parameter in the backup parameter settings specifies the number of data files that can be simultaneously written to the same Back Set number
- D. To achieve Oracle RAC table-level recovery, the backup parameter settings must be in the "option" tab check the "enable table browse" option

Correct Answer: B
