QUESTION 1

What benefits can a microservices architecture bring? () [Multiple choice questions]

- A. The boundaries of service modules are clearer: microservices emphasize modular structure (REST interface calls). This is very important for large teams.
- B. Supports independent deployment: simple services are easier to deploy. Because the services are autonomous, there will be no system crash after a problem occurs.
- C. Simple operation and maintenance: Stateless, self-service operation and maintenance eliminates the need for a mature operation and maintenance team (mechanism) in the system. Significant cost savings
- D. Allow technology diversity: With micSroservices, you can mix multiple programming languages, development frameworks, and data storage technologies.

Correct Answer: ABD

QUESTION 2

What is the smallest unit to create, schedule, and manage in Kubernetes?

- A. Node
- B. Pod
- C. Service
- D. deployment

Correct Answer: B

QUESTION 3

In the diagram below, what is the correct statement about the coordination of Huawei Cloud Elastic Load Balancing and Elastic Services? ()

- A. the service configuration in the elastic scaling group can be different
- B. the cloud servers in this figure all provide the same services to the outside

Correct Answer: B

QUESTION 4

Although a software developer specializing in small and micro financial systems has a large number of users, since the current operating model is mainly selling licenses, it is necessary to allocate corresponding operation and maintenance personnel to customers scattered throughout the country. This causes a lot of waste in operation and maintenance costs. What kind of solution can the company use to change this business model?

- A. Transform software architecture with cloud middleware to improve efficiency
- B. Software SaaS is correct
- C. Applying microservices solutions
- D. Computing platforms using Serverless functions

Correct Answer: B

QUESTION 5

Huawei Cloud Distributed Database Middleware DDM Service is a distributed database access service that is used as a front-end. [Multiple choice questions]

- A. DCS
- B. DMS
- C. RDS
- D. Oracle

Correct Answer: C
