### QUESTION 1

In the following sentence, which is the dependent clause?

Sofia won't be able to compete in the race because she wrecked her car.

- A. because she wrecked her car
- B. compete in the race
- C. Sofia won't be able to compete in the race
- D. her car

Correct Answer: A

---

### QUESTION 2

A woman's body usually ovulates around what day in a normal 30-day cycle?

- A. Day 5.
- B. Day 10.
- C. Day 14.
- D. Day 22.

Correct Answer: C

---

### QUESTION 3

Neurologists and biological psychologists have witnessed a sharp increase in the knowledge and understanding of particular structures of the brain over the past two decades. As technology becomes ever more advanced, scientists are able to isolate the functions of even small regions of the human brain. One noteworthy discovery is the role of the amygdala in human fear and aggression. The amygdala, a small, almond-shaped conglomerate, is just one part of the limbic system. Located at the very center of the brain, the limbic system is the core of our 'emotional brain;' each individual structure in the limbic system is somehow connected to an aspect of human emotion. Scientists have found that electrode stimulation of the amygdala can elicit extreme and aggressive acts. Patients or experimental subjects who experience this utter rage and fearlessness have no rational foundation for their reaction. In other words, this aggression is wholly attributable to electrode stimulation. On the other hand, patients with trauma or damage to this structure exhibit a complete absence of aggression. Researchers find that no amount of poking, prodding or harassment will evoke even remotely aggressive responses from these subjects.

What is the main idea of the passage?

- A. The human brain is as complex as it is mysterious.
- B. Patients with damaged amygdalas are less aggressive than individuals with healthy ones.
- C. Electrode stimulation is a valuable tool for researchers who study the human brain.
- D. Scientists have learned a lot about how the amygdala affects human emotion.

Correct Answer: D

#### QUESTION 4

Which of the following correctly describes the oxidation state of the sulfur atom in sulfuric acid?

- A. +5
- B. +6

C. +7

D. +8

Correct Answer: B

---

#### QUESTION 5

Which word, meaning "to examine by touch," fits best into this sentence?

"The pediatrician \_\_\_\_\_ the young patient's abdomen to see if she could discover what was causing the girl's pain."

A. pondered

B. palpated

C. perpetuated

D. projected

Correct Answer: B
