QUESTION 1

Which statements are true about event lifecycle data collection and the event processing phase? (Select two.)

- A. Model confidence is determined, based on details provided by the event source.
- B. Each line of incoming log data is processed as a separate event.
- C. Event severity is determined, based on an Active List of recent severity factors.
- D. Values are normalized and entered into the ArcSight Event Schema.

Correct Answer: BD

QUESTION 2

How do asset categorization and event categorization relate to each other?

- A. Asset categorization requires custom FlexConnectors; event categorization uses standard Smartconnectors.
- B. Asset categorization and event categorization are the same.
- C. Asset categorization is the fingerprint of an asset; event categorization is a set of criteria that describes an event.
- D. Asset categorization and event categorization use the same field set to apply categories to assets and events

Correct Answer: D

QUESTION 3

From where are the local ArcSight Console Preference Settings accessed?

- A. File Menu
- B. Edit Menu
- C. Tools Menu
- D. View Menu

Correct Answer: C

QUESTION 4

What is a bundle?

- A. a set of resources that makes up a package
- B. a data transmission containing SSL information

- C. a set of raw log events before they are parsed
- D. a container for one or more packages

Correct Answer: D

QUESTION 5

What Is the ArcSight Event Schema?

- A. a format into which event data is normalized prior to persistence into storage
- B. a collection of SmartConnectors that provide data to the ArcSight Manager
- C. a set of events with a common format, collected over a user-defined time period
- D. a map correlating IP addresses with devices to designate the source of events

Correct Answer: C
