**QUESTION 1**

Which HP ProVision switch command could a network administrator use to upgrade the operating system from an attached USB drive?

- A. Update from usb flash
- B. Copy usb flash
- C. File-management usb
- D. Upgrade usb flash

Correct Answer: B

**QUESTION 2**

Refer to the exhibit.

Exhibit HP Comware command output.

```
<Comware> display link-aggregation verbose bridge-aggregation 2
<-output omitted->
System ID: 0x8000, 000f-e267-6c6a
```

Local:				
Port	Status	Priority	Oper-key	Flag
GE1/0/3	8	32768	2	(ACDEF)
GE1/0/4	8	32768	2	(ACDEF)

  

Remote:					
Actor	Partner	Priority	Oper-key	SystemID	Flag
GE1/0/3	32	32768	2	0x8000, 000f-r267-57ad	(A)
GE1/0/4	26	32768	2	0x8000, 000f-r267-57ad	(A)

Examine this output from the Comware command shown in the exhibit. Based on the flag of ACDEF, what is the status of the aggregated link?

- A. Static LACP link aggregation is configured, and the aggregated link is operational with load sharing not being performed.
- B. Static LACP link aggregation is configured, and the aggregated link is operational with load sharing being performed.
- C. Static link aggregation is configured, and the aggregated link is operational with load sharing being performed.

D. Static link aggregation is configured, and the aggregated link is operational with load sharing not being performed.

Correct Answer: B

---

### QUESTION 3

Which HP Comware component allows a network administrator to adjust the logging process?

- A. SNMP management center
- B. Information center
- C. Logging process
- D. System logging center

Correct Answer: B

Acting as the system information hub, information center classifies and manages system information, offering a powerful support for network administrators and developers in monitoring network performance and diagnosing network problems. The following describes the working process of information center:

Receives the log, trap, and debugging information generated by each module. Outputs the above information to different information channels according to the user-defined output rules. Outputs the information to different destinations based on the information channel-to-destination associations.

---

### QUESTION 4

What is the maximum number of Watts that the IEEE 802.1af standard supports?

- A. 11.2
- B. 15.4
- C. 17.7
- D. 25.5

Correct Answer: B

---

### QUESTION 5

Refer to the exhibit.

Exhibit Comware switch output.

**[Comware] display link-aggregation verbose bridge-aggregation 1**

<- output omitted ->

Local:

Port	Status	Priority	Oper-key	Flag
GE1/0/3	U	32768	2	(AG)
GE1/0/4	U	32768	2	(AG)

Remote

<- output omitted ->

A network administrator has implemented link aggregation on an HP Comware switch using LACP.

Assume the two ports are functioning at the data link layer between the Comware switch neighboring switch. The network administrator execution display link-aggregation verbose command and notices the flag of AG for the two links. As

shown in the exhibit.

What does this indicate?

- A. The link is marked as a backup because there are already eight active links in the aggregation
- B. The link is up, but LACP failed the negotiation on the port
- C. The link is down
- D. The link is up, but LACP has been disabled on the port.

Correct Answer: B

Port Status: S -- Selected, U -- Unselected

Flags: A -- LACP\_Activity, B -- LACP\_Timeout, C -- Aggregation,

D -- Synchronization, E -- Collecting, F -- Distributing,

G -- Defaulted, H -- Expired

The flag is a one-octet LACP state flags field. From the least to the most significant bit, they are represented by A through H as follows:

A indicates whether LACP is enabled. 1 for enabled and 0 for disabled. B indicates the timeout control value. 1 for short timeout, and 0 for long timeout. C indicates whether the link is considered as aggregatable by the sending system. 1 for true, and 0 for false.

D indicates whether the link is considered as synchronized by the sending system. 1 for true, and 0 for false.

E indicates whether the sending system considers that collection of incoming frames is enabled on the link.

1 for true and 0 for false.

F indicates whether the sending system considers that distribution of outgoing frames is enabled on the link.

1 for true and 0 for false.

G indicates whether the receive state machine of the sending system is using default operational partner information.

1 for true and 0 for false.

H indicates whether the receive state machine of the sending system is in the expired state.

1 for true and 0 for false.
