### QUESTION 1

It is Monday morning, and no one can connect to the wireless network. The network administrator suspects that the access controller's certificate may have expired and is no longer valid. How can the administrator check if this is the problem?

- A. On the access controller, navigate to Authenticate > Certificate Management, and click the CRL tab. Then click Retrieve CRL
- B. On the access controller, navigate to Authenticate > Certificate Management and click the Domain tab. Then click Retrieve CRL
- C. On the access controller, navigate to Authenticate > Certificate Management and click the Entity tab. Then click Request Cert.
- D. On the access controller, navigate to Authenticate > Certificate Management and click the Certificate tab. Then click Request Cert.

Correct Answer: A

---

### QUESTION 2

When accessing the wireless network in 802.1X with EAP-TLS, what do the user endpoints require?

- A. username and password of the user's account
- B. client certificate or root certificate
- C. client certificate and root certificate
- D. MS-CHAPV2 to be configured

Correct Answer: C

### QUESTION 3

Refer to the exhibit.

The screenshot shows the 'Auto AP' configuration page. At the top, there is a section for 'Auto AP' with a dropdown menu set to 'enable' and an 'Apply' button. Below this is a search bar with a magnifying glass icon, a dropdown menu set to 'AP Name', a 'Search' button, and a link to 'Advanced Search'. A table below the search bar lists discovered APs with columns for 'AP Name', 'Serial ID', 'Model', 'IP Address', and 'Operation'. The table contains one entry: 'ap1\_0001' with Serial ID 'CN2AD330S8', Model 'MSM460-VWW', and IP Address '192.168.11.50'. There is a checkbox next to the AP Name and a small icon in the Operation column.

<input type="checkbox"/> AP Name	Serial ID	Model	IP Address	Operation
<input type="checkbox"/> ap1_0001	CN2AD330S8	MSM460-VWW	192.168.11.50	

Based on the access controller configuration shown in the exhibit, when can newly discovered access points (AP) join this AC?

- A. An AP can automatically join if the controller recognizes the AP serial number
- B. An AP can automatically join if the controller recognizes the AP IP subnet address
- C. An AP can automatically join if the controller recognizes the AP name
- D. An AP can automatically join if the controller recognizes the AP model type

Correct Answer: D

#### QUESTION 4

An organization wants to upgrade their wireless network to allow employees to connect using their 802.11ac enabled devices. Which HP access points meet this requirement?

- A. HP 425
- B. HPMSM466
- C. HP MSM430
- D. HP 560

Correct Answer: D

#### QUESTION 5

A network administrator configures an HP BYOD solution. To authorize guests to register their endpoints, the network administrator sets up components of the Onboarding process. Which configuration settings must the administrator set up in User Access Manager?

- A ☐ Guest Account  
BYODAnonymous Access Service
- B ☐ Default BYOD User  
BYODAnonymous Access Condition
- C ☐ Guest Account  
BYODAnonymous Access Condition
- D ☐ Default BYOD User  
BYODAnonymous Access Service

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: D
