### QUESTION 1

Which action does the Wireless Intrusion Prevention System (WIPS) take when it detects that a device is sending frames with a fixed initialization vector?

- A. captures the frames for future analysis
- B. logs the event
- C. deauthenticates the user
- D. adds the device to the dynamic blacklist

Correct Answer: B

---

### QUESTION 2

A company plans to deploy an HP MSM wireless network. The company currently has a RADIUS server that is used to control employee access to the company\\'s Intranet from wired clients. They want to use the same RADIUS server to control employee\\'s access from wireless clients.

The company also wants to allow guests to connect to the wireless network. They want to allow the guests to reach the Internet, but they want to make sure that guests cannot reach the company\\'s Intranet.

Based on these requirements, which traffic optimization scheme should be implemented?

- A. Deploy distributed forwarding for employees and distributed forwarding with centralized authentication for guests.
- B. Deploy distributed forwarding for employees and centralized access control for guests.
- C. Deploy centralized access control for employees and distributed forwarding with centralized authentication for guests.
- D. Deploy centralized access control for employees and distributed forwarding for guests.

Correct Answer: C

---

### QUESTION 3

A network administrator is setting up a wireless network secured by 802.1X authentication in EAP mode with an HP BYOD solution. What is an important concept to remember when configuring a Windows laptop to access the wireless network?

- A. Root certificates from a Certificate Authority are not needed. The laptop will validate the RADIUS certificate using its client certificate.
- B. Do not validate any certificates sent by the RADIUS server. This may cause security issues.
- C. User Access Manager can self-generate its own certificate, and this kind of certificate does not need any validation.
- D. To automatically validate a certificate sent by User Access Manager (UAM), a client must have a root certificate from

the Certificate Authority that issued the UAM certificate

Correct Answer: A

#### QUESTION 4

Which command allows an administrator to access the HP 830 switch CLI from the controller?

- A. oap management-ip 192.168.0.101 module 1
- B. oap connect slot 0
- C. oap management-ip 192.168.0.101 slot 1
- D. oap connect module 0

Correct Answer: B

#### QUESTION 5

A network administrator configures 802.1X authentication on a wireless network set with an HP 830 Unified Wired-Wireless Controller. The administrator configures a RADIUS scheme named radius1 and a Domain scheme name domain1. Which other configuration will enable 802.1X?

- A ☐ system-view  
dot1x mandatory-domain radius1
- B ☐ system-view  
dot1x mandatory-domain domain1
- C ☐ system-view  
Interface wlan-ess 1  
dot1x mandatory-domain domain1
- D ☐ system-view  
Interface wlan-ess 1  
dot1x mandatory-domain radius1

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: D
