Parameters

ip-address: Specifies the management IP address of the OAP module. This address must be configured on the OAP module.

slot slot-number: Specifies the number of the slot where the switching engine resides. The value of this field must be 0.

Usage guidelines

To use an NMS to manage the switching engine, you must first configure a management IP address for the engine.

Examples

Set the management IP address to 192.168.0.101 for the switching engine of the HP 830 Series PoE+ Unified Wired-WLAN Switch.

 system-view

[Sysname] oap management-ip 192.168.0.101 slot 0

QUESTION 3

A business deploys a wireless network that includes an HP 10500/7500 module and 120 access points (APs). They plan to increase the number of APs to 250. Which step must be performed in order to register the upgrade\\'s license management feature?

A. On the controller, in System view, enter the command license register AP.

B. On the controller, in User view, enter the command license register AP.

C. On the controller, in the My Networking Windows, select the update licenses option.

D. On the controller, in License view, enter the command register AP.

Correct Answer: B

QUESTION 4
