QUESTION 1

A network administrator adds a new VLAN in a campus network, VLAN 120. The administrator needs to set up a DHCP scope for this VLAN. The scope will include an IP address for DHCP clients and a default gateway address. An HP Comware aggregation layer switch acts as a DHCP server for this VLANs at the access layer. The administrator configures this on the Comware switch for the new DHCP scope:

```
dhcp server ip-pool 120
  network 10.1.120.0 24
  gateway 10.1.120.254
  expired 1 day
  quit
dhcp server forbidden-ip 10.1.120.250 10.1.120.254
dhcp server ping packets 2
dhcp server ping timeout 750
```

Based on this configuration, what else must the administrator configure to make the pool available to DHCP clients that send requests in VLAN 120?

- A. dhcp vlan 120
- B. dhcp server ip pool 120vlan 120
- C. dhcp enable
- D. dhcp server vlan 120

Correct Answer: C

QUESTION 2

Which statement is true concerning spanning tree protocols and HP switches?

- A. ProVision switches use non-standard default cost values
- B. Comware switches have spanning tree enabled, by default
- C. ProVision switches, by default, auto-sense edge ports
- D. Comware switches use their serial number as the switch identifier in the bridge ID

Correct Answer: C

QUESTION 3

Refer to the exhibit.

```
<Switch> display port trunk
Interface          PVID    VLAN passing
GE1/0/19           1       1,11
```

The network administrator has configured this port to permit all VLANs. The output in the exhibit indicates that the port is only passing VLANs 1 and 11. The administrator wants the port to pass VLAN 12 as well. What should the administrator do to accomplish this?

- A. Enable IP routing.
- B. Add VLAN 12 to the switch.
- C. Change the port link-type to hybrid.
- D. Change the port link-type to access.

Correct Answer: A

QUESTION 4

A network administrator wants to disable physical interfaces 13-24 on an HP ProVision switch. How can the administrator do this?

- A. Create a named port group for interfaces 13-24. Then disable the named port group.
- B. Use the interface disable command. Specify 13-24 for the ID.
- C. Assign the range of interfaces to a VLAN. Then, disable the VLAN.
- D. Create a named range for interfaces 13-24. Then, disable the named range.

Correct Answer: D

QUESTION 5

Refer to the Exhibit.

A network administrator needs to configure DHCP on SwitchA. Assume that SwitchA is an HPE Comware switch and is

using the default settings for DHCP. The administrator configures the following information:

```
[SwitchA] dhcp relay server-group 1 ip 10.1.1.1
[SwitchA] interface vlan-interface 1
[SwitchA-Vlan-interface1] dhcp select relay
[SwitchA-Vlan-interface1] dhcp relay server-select 1
[SwitchA-Vlan-interface1] quit
```

The administrator then has the DHCP client try to acquire addressing information, but the process fails. What should the administrator do to solve this problem?

- A. Execute the routing command on SwitchA.
- B. Execute the dhcp enable command on SwitchA.
- C. Configure DHCP relay on SwitchB.
- D. Enable DHCP Snooping on SwitchA.

Correct Answer: B
