QUESTION 1

The demonstration of iSCSI Persistent Ports during an HPE 3PAR StoreServ proof of concept fails. What is a possible cause of failure?

A. The connected switch gets a loss_sync of the HPE 3PAR StoreServ port and disconnects the port immediately.

B. The connected switch does not accept an unsolicited ARP and does not update the IP address mappings.

C. Zoning is not implemented correctly, and the host could not connect to the partner port.

D. Port Persistence is not configured correctly, so the partner port could not be activated in a timely manner.

Correct Answer: D

QUESTION 2

At which level is an HPE 3PAR StoreServ deduplication performed?

A. CPG

B. VV

C. RAID

D. RCG

Correct Answer: C

QUESTION 3

Which requirements must be considered when designing and sizing an HPE 3PAR StoreServ environment for periodic asynchronous replication?

A. Size only the source array to account for the IOPS resulting from snapshot created by Remote Copy.

B. Size both arrays to account for the IOPS resulting from snapshots created by Remote Copy.

C. Use a CPG with SAS drives for Remote Copy snapshots.

D. Size only the target array to account for IOPS resulting from snapshots created by Remote Copy.

E. Use a CPG with nearline drives for Remote Copy snapshots.

Correct Answer: AE

QUESTION 4

Which information should be collected and analyzed when discovering customer expectations for replication

performance? (Select two.)

A. rate of data change

B. bandwidth

C. type of data

D. latency

E. frequency of copies

Correct Answer: AD

QUESTION 5

A customer has almost reached the maximum number of domain IDs in a B-series, Fibre Channel SAN fabric. The company has also recently acquired another company and needs to integrate their C-series Fibre Channel SAN to be able to share the SAN infrastructure.

Which feature should you enable on the C-series, Fibre Channel edge switches to meet these requirements?

A. NPV mode

B. FSPF routing

C. hard zoning

D. soft zoning

Correct Answer: C
