-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

A customer needs a consolidated infrastructure view for HPE Synergy and HPE BladeSystem c7000 enclosures. Which approach should the Synergy integrator take to meet the customer's needs?

- A. Enable federation in the HPE OneView appliance and add remote HPE OneView instances.
- B. Add remote enclosures to monitor the BladeSystem c7000 enclosures.
- C. Deploy HPE OneView Global Dashboard.
- D. Extend the Synergy out-of-band management ring to the c7000 Onboard Administrator ports.

Correct Answer: C

QUESTION 2

A Synergy integrator is modifying the network uplink configuration of a Synergy environment that uses HPE Synergy 40Gb F8 Switch Modules for connectivity.

What must the Synergy integrator do to make the necessary modifications?

- A. Connect to the switch module CLI and run the necessary configuration commands.
- B. Connect to the end-of-row (EoR) switches and push the configuration to the switch modules.
- C. Connect to HPE OneView running on the Composer module to modify the Logical Interconnect Group (LIG) configuration.
- D. Connect keyboard, monitor, and mouse to the Frame Link module, and run the network configuration wizard.

Correct Answer: D

QUESTION 3

How can a Synergy integrator increase the efficiency with which a Synergy solution can be provisioned? (Choose two.)

- A. Use Powershell to automate configuration and application of server profiles.
- B. Use Image Streamer to provide a stateless OS environment.
- C. Associate all Synergy frames with the same data center.
- D. Use a Multimodule Link Aggregation Group (MLAG) to automate link failover.
- E. Use Composer as a PXE server to automate OS deployments.

Correct Answer: AB

QUESTION 4

A Synergy integrator is configuring an HPE Synergy environment with two HPE Virtual Connect SE 40Gb F8 modules. The Synergy integrator has four 40Gb uplinks connected to two upstream switches and needs all compute modules to share the full 160Gb of available bandwidth. The upstream switches are interconnected in a virtual port channel (vPC) pair.

What should the integrator do to ensure that the switch configuration does not result in a network loop?

- A. Cross connect the Virtual Connect modules to the upstream switches and select all four 40Gb ports for the uplink. Virtual Connect will automatically configure the Multimodule Link Aggregation Group (MLAG).
- B. Create two separate Virtual Connect uplinks. Select two ports from each module for each uplink. Configure spanning tree protocol (STP) on both Virtual Connect uplinks to default to port forward mode.
- C. Cross connect the Virtual Connect modules to the upstream switches and select all four 40Gb ports for the uplink. Configure spanning tree protocol (STP) on the Virtual Connect uplink to default to port forward mode.
- D. Create two separate Virtual Connect uplinks. Select one port from each module for each uplink. Use two separate Logical interconnect Groups (LIGs) to keep the uplinks from looping.

Correct Answer: B

QUESTION 5

DRAG DROP

Use the arrow or click and drag the HPE Synergy components on the left to their correct order for a firmware update, based on HPE best practices, on the right.

Select and Place:

Component	Order
HPE Synergy Frame Link modules, interconnect modules, and I/O adapters.	
HPE Synergy Composer	
HPE Synergy Compute modules	
HPE Synergy Image Streamer	

Correct Answer:

Component

Order

HPE Synergy Composer

HPE Synergy Image Streamer

HPE Synergy Frame Link modules, interconnect modules, and I/O adapters.

HPE Synergy Compute modules
