QUESTION 1

HOTSPOT

An HPE Synergy customer needs to prevent a timeout and loss of communication during an external switch firmware upgrade.

Click the parameter that the customer should configure within an uplink set to meet this requirement.

Hot Area:

Create Uplink Set ?

General

Name	Prod-US
Consistency checking	Exact match ⌄
Type	Ethernet ⌄
Connection mode	Automatic
LACP timer	Short (1s) ⌄
LACP load balancing	Source & Destination MAC Address ⌄
LACP failover trigger	All active uplinks transition to offline ⌄
LACP distribute uplink ports	☑

Correct Answer:

Create Uplink Set

?

General

Name	Prod-US
Consistency checking	Exact match ⌄
Type	Ethernet ⌄
Connection mode	Automatic
LACP timer	Short (1s) ⌄
LACP load balancing	Source & Destination MAC Address ⌄
LACP failover trigger	All active uplinks transition to offline ⌄
LACP distribute uplink ports	☑

QUESTION 2

DRAG DROP

Match each HPE Synergy logical component with the definition.

Select and Place:

Component		Definition
Enclosure group		Acts as a recipe for creating a group that represents the available networks, uplink sets, and interconnect settings for a set of physical interconnects in a set of enclosures.
Logical enclosure		A single administrative entity that consists of the configuration for a set of interconnects in a single enclosure or a frame link topology.
Logical interconnect		A logical resource that defines a consistent configuration for an enclosure or a set of enclosures making up a logical enclosure.
Logical interconnect group		Contains the configuration intended for a set of physical enclosures.

Correct Answer:

| Component		Definition
Logical interconnect group		Acts as a recipe for creating a group that represents the available networks, uplink sets, and interconnect settings for a set of physical interconnects in a set of enclosures.
Logical interconnect		A single administrative entity that consists of the configuration for a set of interconnects in a single enclosure or a frame link topology.
Enclosure group		A logical resource that defines a consistent configuration for an enclosure or a set of enclosures making up a logical enclosure.
Logical enclosure		Contains the configuration intended for a set of physical enclosures.

QUESTION 3

DRAG DROP

Match HPE SimpliVity term with the definition.

Select and Place:

Correct Answer:

QUESTION 4

DRAG DROP

Match each HPE OneView network type with its definition.

Select and Place:

Network Type		Definition
Internal network		A network that contains multiple networks on a single uplink set that allows your customer to share uplinks with those networks.
Tagged network		A network in which any tagged packets are dropped and forwarding is done by a MAC address.
Tunnel network		A network with a dedicated set of uplink ports used to pass a group of VLANs without changing the VLAN tags.
Untagged network		A network that does not utilize any uplink ports and is used for communication between servers in the same frame.

Correct Answer:

Network Type			Definition
	Untagged network		A network that contains multiple networks on a single uplink set that allows your customer to share uplinks with those networks.
	Tagged network		A network in which any tagged packets are dropped and forwarding is done by a MAC address.
	Tunnel network		A network with a dedicated set of uplink ports used to pass a group of VLANs without changing the VLAN tags.
	Internal network		A network that does not utilize any uplink ports and is used for communication between servers in the same frame.

QUESTION 5

DRAG DROP

Match HPE SimpliVity team with the definition.

Select and Place:

Term		Definition
Arbiter		Non-hyperconverged servers that can exist in an HPE SimpliVity environment and provide additional compute capacity while consuming the storage provided by the hyperconverged nodes.
Compute node		Provides centralized management and events end-point for vCenter.
Intelligent Workload Optimizer		Integrates with VMware Distributed Resources Scheduler to ensure optimal placement of the VM compute resources.
Management Virtual Controller		Facilitates communication between nodes and resolves state conflicts to ensure service continuity.

Correct Answer:

Term		Definition
	Arbiter	Non-hyperconverged servers that can exist in an HPE SimpliVity environment and provide additional compute capacity while consuming the storage provided by the hyperconverged nodes.
	Compute node	Provides centralized management and events end-point for vCenter.
	Management Virtual Controller	Integrates with VMware Distributed Resources Scheduler to ensure optimal placement of the VM compute resources.
	Intelligent Workload Optimizer	Facilitates communication between nodes and resolves state conflicts to ensure service continuity.
