QUESTION 1

What is required in order to prevent other hosts from mounting the source volume in the Peer Motion import stage migration workflow even after the migration?

A. Set an SCSI Buffer Queue Full on each source volume.

B. Set a longer SCSI time-out value on each source volume.

C. Set the SCSI time-out value to zero on each source volume.

D. Place an SCSI-3 reservation on each source volume.

Correct Answer: C

QUESTION 2

DRAG DROP

Arrange the process of HPE RMC-3PAR application data protection in the right order.

Select and Place:

Correct Answer:

Application Data Protection

Order

HPE StoreOnce deduplication reduces backup storage requirements and enables cost-effective, reliable retention.
HPE StoreOnce ingests changed blocks to create deduplicated, independent, synthetic full image backup.
The application quiesces momentarily while a consistent, non-disruptive snapshot is created on HPE 3PAR.
The application owner triggers backup using the native interface/utility.
RMC leverages unique HPE 3PAR SnapDiff block-change detection technology to send only unique changed data to HPE StoreOnce, using multi-streaming for faster backup.

QUESTION 3

Which functionalities are supported by the 16Gb FC adapter installed in the HPE 3PAR StoreServ 9450 controller node? (Select three.)

A. iSCSI Host Connectivity

B. Remote Copy Connectivity

C. FC Host Connectivity

D. Drive Enclosure Connectivity

E. File Persona Connectivity

F. Peer Ports Connectivity

Correct Answer: BCE

QUESTION 4

What are the requirements for bidirectional HPE 3PAR Storage Federation setup? (Select two.)

A. 2 remote copy ports in each array for inter-array connectivity

B. 2 host ports in each array for inter-array connectivity

C. 2 host ports in each array for host connectivity

D. 2 file persona ports in each array for inter-array connectivity

E. 2 peer ports in each array for inter-array connectivity

Correct Answer: CD

QUESTION 5

In the Oracle database environment, how can 3PAR Priority Optimization help to improve the application?

A. Setting the IOPS increases the throughput of data per second, thus decreasing the completion time of databases queries.

B. Setting the response time or latency improves transaction times in the database.

C. Setting the bandwidth controls the IOPS, thus only applying to OLTP workloads.

D. Setting the bandwidth reduces the wait time of the storage responding to the server request.

Correct Answer: A
