QUESTION 1

Refer to the exhibit.

The branch office RAP shown in the exhibit provides secure wireless employee access. Because of security concerns, the company's security policy does not allow wireless guest access. Some customers that visit the Branch office need Internet access. A RAP's Ethernet Port 3 is used for wired guest access and Port 2 is used for wired employee access. When employees connect to Port 2, they are authenticated successfully and split-tunnel policy allows them access to both corporate and Internet resources from the Branch office. Guest users, however, cannot access Internet resources on Port 3.

How can the administrator provide guest users internet access?

- A. Implement ClientMatch to handle the employee and guest user traffic correctly.
- B. Implement the MultiZone feature on the RAP.
- C. Configure a bridge role for the wired RAP port.
- D. Create a guest VAP that allows wired RAP port access.
