QUESTION 1

Which WSDL should an architect consider when creating an integration that might be used for more than one salesforce organization and different met?

- A. Corporate WSDL
- B. Partner WSDL
- C. SOAP API WSDL
- D. Enterprise WSDL

Correct Answer: B

QUESTION 2

A company wants to standardize exception tracking, handling, and analytics. Given the following actions:

1. Build a company wide logging service hosted on a middleware platform
2. Create case object records for exceptions based thresholds
3. Change all their Apex Loggers to publish Application Exceptions as custom Platform Events.

Which two specifications should the integration architect include in the logging service architecture? Choose 2answers

- A. Receive Application Events through Change Data Capture (CDC).
- B. Create Salesforce Cases using the Salesforce REST, SOAP or Bulk API.
- C. Create Salesforce Cases conditionally using automatic Case creation rules.
- D. Subscribe to the Application Exceptions using the Salesforce Streaming API.

Correct Answer: BC

QUESTION 3

Northern Trail Outfitters (NTO) leverages Sales Cloud for tracking and managing leads, accounts, contacts, and opportunities- Orders and order fulfillment is taken care of by an Order Management System (OMS) in the back-office. When an

opportunity has changed it\\'s status to "Closed/Won" and there are products attached, the details should be passed to the OMS for fulfillment operations.

The callout from Salesforce to the OMS should be synchronous.

What should an Integration Architect do to satisfy these requirements?

- A. Write a trigger that invokes an Apex proxy class to make a REST callout to the Order Management System.
- B. Use Process Builder to call an Apex proxy class to make a REST callout to the Order Management System.
- C. Develop a batch Apex job that aggregates Closed Opportunities and makes a REST callout to the Order Management System hourly.
- D. Build a Lightning Component that makes a synchronous Apex REST callout to the Order Management System when a button is clicked.

Correct Answer: B

QUESTION 4

An Architect is asked to build a solution that allows a service to access Salesforce through the API. What is the first thing the Architect should do?

- A. Create a new user with System Administrator profile.
- B. Authenticate the integration using existing Single Sign-On.
- C. Authenticate the integration using existing Network-Based Security.
- D. Create a special user solely for the integration purposes.

Correct Answer: D

QUESTION 5

Given the diagram below, a Salesforce org, middleware, and Historical data store (with 20 million records and growing) exists with connectivity between them. Historical records are archived from Salesforce and moved to Historical Data store

(which houses 20M records and growing; fine-tuned to be performant with search queries).

Call center agents use Salesforce, when reviewing occasional special cases, have requested access to view the related historical case items that relate to submit cases.

Which mechanism and patterns are recommended to maximize declarative configuration?

- A. Use ESB tool with Data Virtualization pattern, expose OData endpoint, and then use Salesforce Connect to consume and display the External Object alongside with the Case object.
- B. Use an ESB tool with a fire and forget pattern and then publish a platform event for the requested historical data.
- C. Use an ESB tool with Request-Reply pattern and then make a real-time Apex callout to the ESB endpoint to fetch and display component related to Case object.
- D. Use an ETL tool with a Batch Data Synchronization pattern to migrate historical data into Salesforce and into a custom object (historical data) related to Case object.
