QUESTION 1

You want to design a networking solution for your data center that relies on dynamic service chaining of virtual services and network functions rather than relying on standalone physical appliances to host those services.

In this scenario, which solution should you consider?

- A. MPLS
- B. ATP
- C. NFV
- D. VXLAN

Correct Answer: C

QUESTION 2

You are designing a data center where all your servers in each rack will be connected to two top-of-rack (ToR) switches using Layer 2, as shown in the exhibit. You must implement a high availability solution that maintains link layer connectivity to each server when one of the ToR switches fails.

In this scenario, which solution will accomplish this task?

- A. Virtual Chassis with LAG
- B. chassis cluster with LAG
- C. non-stop bridging (NSB)
- D. bidirectional forwarding detection (BFD)

Correct Answer: A

QUESTION 3

You are designing a large IP fabric and must determine if you should use IBGP or EBGP to signal your underlay.

Which statement is correct in this scenario?

- A. IBGP will require a full mesh on all devices.
- B. IBGP will allow your network to scale to larger device numbers.
- C. EBGP will require more BGP neighbors per device.
- D. EBGP will require that an IGP is also configured.

Correct Answer: B

QUESTION 4

According to Juniper Networks, what are two recommendations for implementing data center security? (Choose two.)

- A. Perimeter security in a data center is normally performed on virtual devices.
- B. Perimeter security in a data center is normally performed on physical devices.
- C. DDoS protection is implemented at the perimeter of the data center.
- D. DDoS protection is implemented at the core of the data center.

Correct Answer: BC

QUESTION 5

Click the Exhibit button.

For a fully configured and functional IP fabric underlay as shown in the exhibit, how many external BGP neighbors are expected to be in established state for Leaf 1?

A. 4

B. 5

C. 2

D. 3

Correct Answer: C
