**QUESTION 1**

Exhibit:

IGP Links all have metric 10

You work for service provider B that wants to implement a hot potato routing policy on the network so that router C uses link C-A to reach service provider A\\'s advertised routes and router D uses link D- B to reach Service Provider A\\'s advertised routes Currently traffic from router C is traversing the core to exit the network on router B . Referring to the exhibit, what are two design actions that would satisfy the requirements? (Choose two.)

A. Implement BGP-ORR

B. Configure new IBGP neighbors between routers C and A and routers D and B

C. Implement BGP-LS

D. Configure the route reflector to send multiple copies of a route learned from different IBGP peers to its clients.

Correct Answer: BD

**QUESTION 2**

Which statement is correct regarding classifiers in CoS?

A. Classifiers are used to route traffic between routing instances.

B. Classifiers are used to define the transmit rate for forwarding classes.

C. Classifiers are used to separate traffic into different forwarding classes.

D. Classifiers are used to change DiffServ values on outgoing packets.

Correct Answer: C

## QUESTION 3

Your team manages a WAN consisting of multiple customer MPLS tunnels. You are asked to design an

SDN WAN solution capable of signaling LSPs to avoid nodes or links before they are removed from the

network for service.

Which Juniper Network\\'s SDN WAN solution satisfies these requirements?

A. NorthStar Controller Bandwidth Calendaring

B. NorthStar Planner Path Design

C. NorthStar Planner Failure Simulation D. NorthStar Controller Maintenance Mode

Correct Answer: B

## QUESTION 4

Your customer\\'s enterprise is adding geographically-dispersed branch offices and requires new WAN

connections. The primary design consideration for this expansion is low cost but the branches must remain

secure with low latency.

Which type of Internet access model satisfies the customer\\'s requirement in this scenario?

A. distributed model with security at the hub

B. centralized model with security at the hub

C. centralized model with security at each branch

D. distributed model with security at each branch

Correct Answer: D

## QUESTION 5

Which security implementation does Juniper Networks recommend for all core routers in a service provider network?

A. intrusion and detection prevention

B. unified threat management

C. application firewall

D. stateless loopback firewall filter

Correct Answer: D
