QUESTION 2

Which statement is correct about Ansible playbooks?

- A. A playbook is a configuration file that defines the Ansible related parameters
- B. A playbook contains one or more tasks written in XML
- C. A playbook can contain multiple tasks and execute multiple Python modules
- D. A playbook is a specific Python module that is executed on a host

Correct Answer: C

QUESTION 3

You are asked to gather interface information from a Junos device. Your environment supports the JSON format. To determine how interface information is represented, you decide to view all of the configured interface key-value pairs in the current Junos candidate configuration.

In this scenario, which command will provide the information that you need?

- A. user@router# show interfaces | find json
- B. user@router# show interfaces | display json
- C. user@router# show interfaces | except json
- D. user@router# show interfaces | match json

Correct Answer: B

QUESTION 4

Which statement is true about using Ansible a Junos device?

- A. The Junos device does not have an Ansible agent installed
- B. SFTP must be used to allow communication between the Ansible control server and the Junos device
- C. An Ansible playbook is a set of tasks written in XML
- D. Ansible modules are copied and executed on the Junos device

Correct Answer: D

QUESTION 5
