QUESTION 1

You must establish an MPLS LSP between two locations. You are required to ensure that the LSP traverses specific routers within the network.

Which solution is correct in this scenario?

- A. Enable traffic engineering within RSVP and enable the Fast Reroute feature
- B. Implement RSVP and define the explicit route the LSP must follow
- C. Implement LDP and define the explicit route the LSP must follow
- D. Enable traffic engineering within LDP and define the explicit route the LSP must follow

Correct Answer: B

QUESTION 2

Click the Exhibit button.

```
[edit protocols ospf]
user@router# show
reference-bandwidth 100m
area 0.0.0.0 {
    interface ge-1/0/0.0 {
        interface-type p2p;
    }
    interface ge-3/0/0.0 {
        priority 128;
    }
    interface xe-0/0/0.0 {
        interface-type nbma;
    }
}
```

Referring to the exhibit, which statement is correct?

- A. Interface ge-3/0/0.0 has a default metric of 10
- B. Interface xe-0/0/0.0 can only form a single adjacency
- C. Interface xe-0/0/0.0 has a default metric of 10
- D. Interface ge-1/0/0.0 can only form a single adjacency

Correct Answer: D

QUESTION 3

Click the Exhibit button.

```
[edit protocols]
user@router# show
protocols {
  oam {
    gre-tunnel {
      interface gr-1/1/10.1 {
        keepalive-time 10;
        hold-time 30;
      }
    }
  }
}
```

Referring to the exhibit what are two reasons for the configuration stanza? (Choose two.)

- A. to reduce the risk of forwarding traffic through a stateless tunnel
- B. to mark the tunnel down after the hold-time expires
- C. to remove the tunnel interface from inet.0 after the hold-time expires
- D. to mark the tunnel up after the hold-time expires

Correct Answer: AB

QUESTION 4

Click the Exhibit button.

```
[edit]
user@R1# show interfaces
ge-0/0/0 {
  unit 0 {
    family inet6 {
      address 2001:0:0:1::2/64;
    }
  }
}
gr-0/0/0 {
  unit 0 {
    tunnel {
      source 192.168.1.1;
      destination 192.168.1.2;
    }
  }
}
ge-0/0/1 {
  unit 0 {
    family inet {
      address 192.168.100.1/24;
    }
  }
}
fxp0 {
  unit 0 {
    family inet {
      address 10.0.1.12/24;
    }
  }
}
```

```
[edit]
user@R1# show routing-options
rib inet6.0 {
  static {
    route 2001:0:0:2::0/64 next-hop gr-0/0/0.0;
  }
}
static {
  route 0.0.0.0/0 next-hop 10.0.1.1;
  route 192.168.1.2/32 next-hop 192.168.100.2;
}
```

You have configured IPv6 over IPv4 tunneling, as shown in the exhibit. However, hosts connected to network 2001:0:0:1::0/64 cannot communicate with hosts on network 2001:0:0:2::0/64. The router R2 has a similar configuration as the R1 router.

How would you solve this problem?

- A. Configure an IGP across the tunnel interfaces
- B. Configure an IPv6 address on the tunnel interfaces
- C. Configure the next hop of the inet6.0 static route to point to the physical interface between the routers
- D. Configure the next hop of the inet6.0 static route to point to the IPv4 address of the remote router

Correct Answer: D

QUESTION 5

You are asked to change the default TTL handling behavior on your Junos device to ensure that the RSVP-signaled LSPs in your MPLS network cannot be mapped.

Which configuration should be performed to accomplish this task?

- A. Configure the no-decrement-ttl parameter for each LSP on the ingress device
- B. Configure the no-propagate-ttl parameter for each LSP on the egress device
- C. Configure the no-propagate-ttl parameter for each LSP on the ingress device
- D. Configure the no-decrement-ttl parameter for each LSP on the egress device

Correct Answer: B
