-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Exhibit.

Referring to the exhibit, which two statements are true? (Choose two.)

- A. Juniper Networks will not investigate false positives generated by this custom feed.
- B. The custom infected hosts feed will not overwrite the Sky ATP infected host's feed.
- C. The custom infected hosts feed will overwrite the Sky ATP infected host's feed.
- D. Juniper Networks will investigate false positives generated by this custom feed.

Correct Answer: AC

Explanation: https://www.juniper.net/documentation/en_US/junos-space18.1/policy-enforcer/topics/task/configuration/junos-space-policyenforcer-custom-feeds-infected-host-configure.html

QUESTION 2

Exhibit

You configure Source NAT using a pool of addresses that are in the same subnet range as the external ge-0/0/0 interface on your vSRX device. Traffic that is exiting the internal network can reach external destinations, but the return traffic is being dropped by the service provider router.

Referring to the exhibit, what must be enabled on the vSRX device to solve this problem?

- A. STUN
- B. Proxy ARP
- C. Persistent NAT
- D. DNS Doctoring

Correct Answer: D

QUESTION 3

You are asked to allocate security profile resources to the interconnect logical system for it to work properly. In this scenario, which statement is correct?

- A. The NAT resources must be defined in the security profile for the interconnect logical system.
- B. No resources are needed to be allocated to the interconnect logical system.
- C. The resources must be calculated based on the amount of traffic that will flow between the logical systems.
- D. The flow-session resource must be defined in the security profile for the interconnect logical system.

Correct Answer: D

Explanation: The flow-session resource is needed in order to ensure adequate and secure communication between the two logical systems.

QUESTION 4

Exhibit You have configured the SRX Series device to switch packets for multiple directly connected hosts that are within the same broadcast domain. However, the traffic between two hosts in the same broadcast domain are not matching any security policies.

```
user@SRX> show ethernet-switching global-information
Global Configuration:
MAC aging interval      : 300
MAC learning           : Enabled
MAC statistics         : Disabled
MAC limit Count        : 65536
MAC limit hit          : Disabled
MAC packet action drop: Disabled
MAC+IP aging interval  : IPv4 - 1200 seconds
                       : IPv6 - 1200 seconds
MAC+IP limit Count     : 65536
MAC+IP limit reached   : No
LE aging time          : 1200
LE BD aging time       : 1200
MP discard notification interval: 60
Global Mode            : Not set
RE state               : Master
VXLAN Overlay load bal: Disabled
VXLAN ECMP             : Disabled
```

Referring to the exhibit, what should you do to solve this problem?

- A. You must change the global mode to security switching mode.
- B. You must change the global mode to security bridging mode
- C. You must change the global mode to transparent bridge mode.
- D. You must change the global mode to switching mode.

Correct Answer: B

QUESTION 5

Exhibit

```

Referring to the exhibit, which statement is true?

- A. This custom block list feed will be used before the Juniper SecIntel
- B. This custom block list feed cannot be saved if the Juniper SecIntel block list feed is configured.
- C. This custom block list feed will be used instead of the Juniper SecIntel block list feed
- D. This custom block list feed will be used after the Juniper SecIntel block list feed.

Correct Answer: D
