QUESTION 1

Which two statements are true about 802.1X dynamic filters based on RADIUS attributes? (Choose two.)

- A. Filters can be defined on the network management system and deployed using vendor-specific attributes.
- B. Filters can be defined on the switch and deployed upon authentication.
- C. Filters can be defined on an automation framework and deployed when triggered by an authentication syslog message.
- D. Filters can be defined on the authentication server and deployed using vendor-specific attributes.

Correct Answer: BD

QUESTION 2

A new PoE+VoIP handset was added to an EX Series device. The handset is experiencing connectivity issues. The EX Series device's committed configuration includes the set PoE interface all telemetry command. You look at the telemetry log in the device to review power consumption and you notice entries have not been occurring for days.

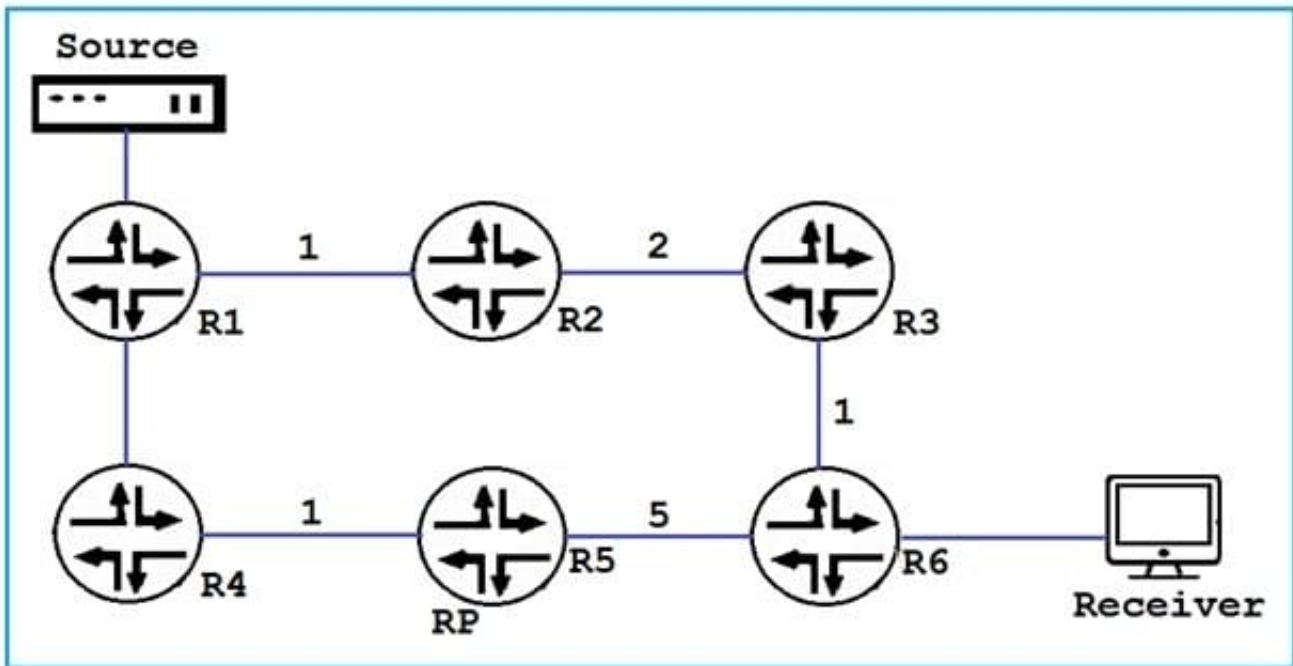

What would cause telemetry logging to stop?

- A. Telemetry logging only occurs for one hour by default.
- B. Telemetry logging stops when all reserved power for PoE has been consumed.
- C. Telemetry logging only works on Enhanced PoE VoIP handsets.
- D. Telemetry logging stops when the logging file reaches 128 KB.

Correct Answer: A

QUESTION 3

Click the Exhibit button.

You have deployed Sparse Mode multicast in your network using the IGP metrics shown in the exhibit.

Which path will (*, G) traffic follow from the source to the receiver before the (S, G) state is registered?

- A. Source, R1, R4, R5, R6, Receiver
- B. Source, R1, R2, R5, R2, R3, R6 Receiver
- C. Source, R1, R2, R3, R6, Receiver
- D. Source, R1, R2, R5, R6, Receiver

Correct Answer: B

QUESTION 4

Click the Exhibit button.

Referring to the exhibit, you have EBGP peerings with both ISP1 and ISP2. You are receiving the 172.25.12.0/24, 172.25.13.0/24, 172.25.14.0/24, and 172.25.15.0/24 routes through both neighbors. You must ensure that traffic to these prefixes are load balanced through both service providers. You have configured a load-balancing policy and have applied it to the forwarding table, but the prefixes are not being load balanced.

What is required to accomplish this task?

- A. The multihop feature should be enabled between both neighbors.
- B. The multipath multiple-as feature should be used between both neighbors.
- C. The as-override feature should be used between both neighbors.
- D. The include-mp-next-hop feature should be used between both neighbors.

Correct Answer: B

QUESTION 5

Which protocol is used for port-level access control and authentication?

- A. MD5
- B. IPsec
- C. 802.1X

D. AES

Correct Answer: C
