In the exhibit, R2 is receiving external routing information for the 192.168.16.0/24 prefix and is redistributing it into IS-IS. R1 has a policy that leaks the 192.168.16.0/24 route into Area 49.1111. R3 has a policy that leaks the 192.168.16.0/24 route into Area 49.2222. However, the IS-IS version of the route does not appear in R2's routing table.

Why does R3's route leaking policy appear not to be working?

- A. The Up/Down bit is set to down for the prefix.
- B. The external flag is set for the prefix.
- C. You can only leak routes from Level 2 to Level 1.
- D. R2 already has better routing information for the prefix.

Correct Answer: A
