QUESTION 1

You are working as the administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. The ABC.com network contains a DMZ that contains a two-node Network Load Balancing cluster, which

is located in a data centre that is physically impenetrable to unauthorized persons.

The cluster servers run Windows Server Web Edition and host an e-commerce website. The NLB cluster uses a virtual IP address that can be accessed from the Internet.

What can you do to mitigate the cluster\\'s most obvious security vulnerability?

A. Configure the cluster to require IPSec.

B. Configure the network cards to use packet filtering on all inbound traffic to the cluster.

C. Use EFS on the server hard disks.

D. Configure intrusion detection the servers on the DMZ.

E. Configure Mac addressing on the servers in the DMZ.

Correct Answer: B

QUESTION 2

The only protocol used by your network is TCP/IP, despite the fact that workstations in the organization do not have access to the Internet. A user has been accessing files on server on your network and now wants to connect to a Web server

that is used as part of the company\\'s intranet. The user enters the URL of the Web site into Internet Explorer.

Which of the following servers will be used to provide information needed to connect to the Web server?

A. DHCP server

B. DNS server

C. WINS server

D. File server

Correct Answer: B

QUESTION 3

You work as a Network Administrator for ABC.com. The company has a Windows Active Directory-based single domain single forest network. The functional level of the forest is Windows Server. The company\\'s headquarters is located at Los Angeles. The company has three branch offices located at San Jose, Oakland, and San Francisco. The company\\'s network is shown in the image below:

All the offices are connected to each other by using 56Kbps demand-dial connections. The branch offices and the headquarters are required to communicate with each other on a regular basis. As you are using demand-dial connections, you do not want the routing updates to be broadcast throughout the network. However, for reliable communications, any changes to the network should be sent to the routers configured on the network. Every router in the network is a server running Windows Server. Which of the following protocols will you use on the routers?

A. RIP 1

B. CHAP

C. RIP 2

D. OSPF

Correct Answer: C

QUESTION 4

The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the ABC.com network run Windows Server.

ABC.com contains a Development department. ABC.com contains a domain controller named ABC-SR24 which is also configured as a DNS Server. A ABC.com employee named Clive Wilson works in the Development department. One

morning Clive Wilson complains that he cannot connect to another network server.

During investigation, you notice that nslookup queries sometimes take a long time and sometimes fail altogether.

You suspect that there is a problem with ABC-SR24.

How would you configure monitoring on ABC-SR24 so that you can review individual name resolution queries?

A. Use System Monitor to monitor host resolution queries on ABC-SR24.

B. Use Event Viewer to view the DNS event log on ABC-SR24.

C. Select the Log packets for debugging option on the Debug Logging tab in the DNS server properties on ABC-SR24.

D. Use Network Monitor to capture DNS query packets on ABC-SR24.

Correct Answer: C

QUESTION 5

You administer your company\\'s network. The network consists of a single Active Directory domain. All servers run Windows Server. The network contains a two-node server cluster. The company\\'s security expert informs you that the

password on the domain user account that is used for the Cluster service has been compromised and must be changed immediately. Your actions should cause minimal or no disruption of the services provided by the cluster because the

cluster is running a mission-critical application.

Which of the following should you do?

A. Use Active Directory Users and Computers to reset the password.

B. Use the Services console to change the password on any one of the cluster nodes.

C. Use the Cluster command with the appropriate options.

D. Use the dsmod user command with the appropriate options.

E. Use the dsmod computer command with the appropriate options.

Correct Answer: C
