QUESTION 1

You are working as the administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. The ABC.com network contains a DMZ that contains a two-node Network Load Balancing cluster, which

is located in a data centre that is physically impenetrable to unauthorized persons.

The cluster servers run Windows Server Web Edition and host an e-commerce website. The NLB cluster uses a virtual IP address that can be accessed from the Internet.

What can you do to mitigate the cluster's most obvious security vulnerability?

- A. Configure the cluster to require IPsec.
- B. Configure the network cards to use packet filtering on all inbound traffic to the cluster.
- C. Use EFS on the server hard disks.
- D. Configure intrusion detection the servers on the DMZ.
- E. Configure Mac addressing on the servers in the DMZ.

Correct Answer: B

QUESTION 2

You are one of the Web hosting administrators for your company's e-commerce environment.

You are trying to configure a Web server called WEBSRV01 running Windows Server Standard Edition. WEBSRV01 currently hosts three different Web sites, two of which only offer static content and one that uses Active Server Pages.

How can you enable Web services for your server so that it will allow you to offer up the different types of content as required on each of the Web sites hosted on the server, using the least amount of administrative effort and maintaining a

high level of security on the base OS of the server?

Select the best answer.

- A. Use the Configure Your Server Wizard to configure the server in the Application Serve role by using the default settings provided.
- B. Use the Configure Your Server Wizard to configure the server in the Web server role b using the default settings provided.
- C. Add the IIS service via the Control Panel and Add/Remove Windows Components. Then, install the service and dynamic content by manually configuring all of the required settings.
- D. Use the Configure Your Server Wizard to configure the server in the Application Serve role, and manually choose the options for dynamic content.
- E. Add the IIS service via the Control Panel and Add/Remove Windows Components. Then, install the service and

dynamic content using the default settings provided when prompted.

Correct Answer: D

QUESTION 3

You work as a Network Administrator for ABC.com. The company has a Windows Active Directory-based single domain single forest network. The functional level of the forest is Windows Server. An intranet-based Web site is required to be

installed on the network. Two servers are available for installing the application. You are required to accomplish the following tasks:

The Web site should be available all the time for the clients.

Both servers should be capable of fulfilling the clients\' requests at a time.

You take the following steps:

Create a two-node server cluster.

Configure one server as an active server and the other as a passive server.

Which of the required tasks will be accomplished by taking these steps?

- A. Both servers will be capable of fulfilling the clients\' requests at a time.
- B. None of the tasks will be accomplished.
- C. The Web site will be available all the time for the clients.
- D. Both tasks will be accomplished.

Correct Answer: C

QUESTION 4

You are the network administrator for your company. The network consists of a single Active Directory domain with five domain controllers that run Windows Server, Enterprise Edition. You are updating the public key infrastructure (PKI) for your company. Issuing Certification Authorities (CAs) have been provided certificates with a validity period of five years. Certificates are issued to enable network users to encrypt files on their computers. Basic EFS certificates have been issued and have been configured with the default validity period. You want to configure all new EFS certificates so that they are valid for up to three years.

What should you do? Each correct answer presents part of the solution. (Choose all that apply.)

- A. Duplicate and rename the Basic EFS certificate template.
- B. Open the Basic EFS certificate template Properties dialog box.
- C. Select the General tab and edit the validity period.
- D. Select the General tab and edit the renewal period.

E. Select the Security tab and change the permission for the Administrators group to Enroll.

Correct Answer: AC

QUESTION 5

The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the ABC.com network run Windows Server.

ABC.com has a main office in Chicago and a branch office in Miami. The two offices are configured as Active Directory sites and are connected by a 56Kbps WAN link which is available only during office hours.

The Miami site contains a domain controller named ABC-DC02.

A ABC.com user named Andy Reid works in the Miami office. One morning Andy Reid complains that the response times on the WAN link is slow. You then investigate the problem and discover that the problem is due to Active Directory

replication activity.

How can you reduce the traffic going over the WAN connection?

- A. By moving the computer object for ABC-DC02 to the Active Directory site for the Chicago office.
- B. By configuring ABC-DC02 as a DNS server.
- C. By having the replication interval decreased on the site link between the two sites.
- D. By having the replication interval increased on the site link between the two sites.
- E. By removing the Global Catalog from ABC-DC02 and enabling universal group membership in the Miami office.

Correct Answer: D
