QUESTION 1

You work as the network administrator at ABC.com. The ABC.com network has a domain named ABC.com. The servers at the ABC.com network run Windows Server. ABC.com has a subsidiary named Test Labs, Inc. that has a domain named testlabs.com.

The ABC.com network has a DNS server named ABC-SR05. ABC-SR05 acts as a secondary zone for testlabs.com

What actions must you take to track when the DNS server at Test Labs, Inc. sends notifications of modifications in the zone of testlabs.com to ABC-SR05?

- A. You must run the gpresult command in verbose mode.
- B. You must select debug logging and set the log to store Notification events on ABC- SR05.
- C. You must run the secedit command in analysis mode.
- D. You must configure a two-way initiated demand-dial connection.

Correct Answer: B

QUESTION 2

You administer your company's Web site, which contains executable programs. You want to provide the highest level of trust to Internet users who download your programs, and you want to ensure that users' browsers will allow them to download the programs. Your company's network includes an enterprise root Certification Authority (CA) and an issuing enterprise subordinate CA.

Which of the following actions should you take?

- A. Request a Code Signing certificate from your company's enterprise subordinate CA.
- B. Request a Code Signing certificate from a commercial CA.
- C. Request a User Signature Only certificate from your company's enterprise subordinate CA.
- D. Request a User Signature Only certificate from a commercial CA.

Correct Answer: B

QUESTION 3

You work as a Network Administrator for Venus ABC.com. The company has a Windows Active Directory-based single domain single forest network. The functional level of the forest is Windows Server. The company wants to expand its network. The clients on the network require Internet connectivity through the router. You plan to install NAT for this purpose. The network plan of the company is shown in the image below:

As the number of clients is quite high, a Class A private network range is required. Which of the following is the correct Class A network address range that is set aside for private use and barred from routing over the network?

- A. 10.0.0.0 to 10.255.255.255
- B. 172.16.0.0 to 172.31.255.255
- C. 192.168.0.0 to 192.168.255.255
- D. 111.0.0.0 to 111.255.255.255

Correct Answer: A

QUESTION 4

The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the ABC.com network run Windows Server.

ABC.com contains a member server named ABC-SR24. ABC-SR24 is configured as a File and Print server and hosts shared folders for all ABC.com users.

One morning a ABC.com user named Dean Austin complains that ABC-SR24 responds poorly at various times throughout the day. You suspect that the poor performance is caused by broadcast traffic on the ABC.com network.

What would be the best way to monitor ABC-SR24 while minimizing administrative effort?

- A. Use System Monitor to monitor the Datagrams/sec counter in the UDPv4 object.
- B. Double click on the Local Area Connection and view the status of the network connection.
- C. Open Task Manager and monitor the Networking tab.
- D. Configure an alert in Performance Monitor to send you an alert when the Datagrams/sec counter in the UDPv4 object is high.

Correct Answer: D

QUESTION 5

One of your hosts in multiple-host NLB cluster requires maintenance. The cluster is heavily used and central to the profitability of your company. You want to bring the node down for service in the least disruptive way. How should you accomplish this goal?

- A. Use the drainstop option on the host needing maintenance.
- B. Use the drainstop option on all the hosts in the cluster not needing maintenance.
- C. Use the suspend option on the host needing maintenance.
- D. Use the suspend option on all the hosts in the cluster not needing maintenance.

Correct Answer: A
