### QUESTION 1

The ABC.com network consists of a single Active Directory domain named ABC.com. All computers on the ABC.com network are members of the ABC.com domain.

You install a new server named ABC-CA1 and configure it as a Certification Authority for the ABC.com domain.

How would you enable an Active Directory global group named CA-Admins to issue, revoke and approve certificates without assigning more permissions than necessary?

- A. Make the CA-Admins group also members of the Domain Admins group in the domain.
- B. Make the CA-Admins group also members of the local Administrators group on ABC-CA1.
- C. Grant the CA-Admins group Full Control permission to the Certificated Template container in the Active Directory.
- D. Make the CA-Admins group members of the Cert Publishers group in Active Directory.
- E. Grant the Certificate Managers role to the CA-Admins group.

Correct Answer: E

---

### QUESTION 2

You have been hired as a consultant to help deploy IPSec for the network of a mediumsize manufacturing firm that is developing a number of new products and must share sensitive data about its products over the network. As part of the planning process, you must determine the best authentication method to use with IPSec. What are the authentication methods that can be used with IPSec? (Select all that apply.)

- A. Kerberos v5
- B. Perfect Forward Secrecy (PFS)
- C. Shared secret
- D. Diffie-Hellman groups

Correct Answer: AC

---

### QUESTION 3

You are working for an administrator for ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. All the servers on the network run Windows Server servers.

You have configured four servers in a network load balancing cluster. You need to enable the cluster in unicast mode although each server only has one network card. After your configuration, the NLB cluster has successfully converged.

You discover that you can optimize the use of the cluster by moving a specific application to each node of the cluster. However for this application to execute, all the nodes of the cluster must be configured by a Network Load Balancing Port

Rule.

When you open Network Load Balancing Manager on one of the NLB nodes, you receive a message saying that Network Load Balancing Manager is unable to see the other nodes in the cluster.

How can you add a port rule to the cluster nodes?

- A. By opening Network Load Balancing Manager on a different host.
- B. By creating an additional virtual IP address on the cluster.
- C. By modifying the Network Connection Properties on every host.
- D. By removing each host from the cluster before creating the port rule.

Correct Answer: C

---

#### QUESTION 4

You have recently purchased a new single-CPU, Intel Xeon-based server. This hardware will be used to run a multithreaded CPU-intensive application. How can you ensure that the application performs at its best on the hardware provided?

- A. Turn on hyperthreading.
- B. Add a second CPU.
- C. Boost the processing priority of the applications threads.
- D. Disable hyperthreading.

Correct Answer: A

---

#### QUESTION 5

You are the administrator of a Windows Server network. You have five WINS servers and need to reconfigure the replication topology as a result of some recent uABCrades to your WAN links. All of your WAN links connecting the head office and your four branch offices now have ample bandwidth to handle additional traffic. You want to ensure the shortest convergence time of replicated records, while at the same time keep the number of replication partnership agreements to an absolute minimum. What replication topology should you choose? (Select the best answer.)

- A. Ring topology
- B. Mesh topology
- C. Hub-and-spoke topology
- D. Hybrid of ring and hub-and-spoke topology

Correct Answer: C
