QUESTION 1

You are working as the administrator at ABC.com. Part of your job description includes the deployment of applications on the ABC.com network. To this end you operate by testing new application deployment in a test environment prior to deployment on the production network.

The new application that should be tested requires 2 processors and 3 GB of RAM to run successfully. Further requirements of this application also include shared folders and installation of software on client computers. You install the application on a Windows Server Web Edition computer and install the application on 30 test client computers.

During routine monitoring you discover that only a small amount of client computers are able to connect and run the application. You decide to turn off the computers that are able to make a connection and discover that the computers that failed to open the application can now run the application.

How would you ensure that all client computers can connect to the server and run the application?

- A. By running a second instance of the application on the server.
- B. By increasing the Request Queue Limit on the Default Application Pool.
- C. By modifying the test server operating system to Windows Server Standard Edition.
- D. By increasing the amount of RAM in the server to 4GB.

Correct Answer: C

QUESTION 2

You work as the network administrator at ABC.com. The ABC.com network has a domain named ABC.com. The servers at the ABC.com network run Windows Server and the workstations, Windows XP Professional.

The ABC.com network has a Web server named ABC-SR10 that has the Internet Information Services (IIS) 6.0 installed. ABC-SR10 hosts a Web site that can be reached from the internal network and the Internet. The internal traffic at

ABC.com needs authentication without a secure protocol to access the Web site; however Internet traffic needs to authenticate with a secure protocol.

What actions must you take to ensure that all accesses to ABC-SR10 use a secure protocol?

- A. You need to configure the log to capture Notification events.
- B. You need to apply the hisecdc.inf predefined security template.
- C. You need to monitor network traffic and IIS logs.
- D. You need to apply a custom security template.

Correct Answer: C

QUESTION 3

Katherine has been asked for her opinion on increasing the fault tolerance of the corporate network, which uses TCP/IP, Active Directory, and Windows 2000 computers. Specifically, the one DNS server on subnet A. Users may run into serious problems if that machine ever experiences downtime, or if the link between the two subnets goes down. Each subnet has its own Windows domain controller. What would you suggest to provide fault tolerance for the network?

- A. Set up a secondary DNS server on subnet B Configure the primary DNS server on subnet A to send notifications of zone changes to the secondary DNS server.
- B. Configure DNS on both domain controllers using Active Directory Integrated zones.
- C. Install a caching-only DNS server on subnet B.
- D. Set up a secondary DNS server on subnet B and configure it to request refreshes from the master DNS server on subnet A.

Correct Answer: B

QUESTION 4

You are the security administrator for your company. The company's network supports 500 users. All network server computers run Windows Server. All network client computers run Windows XP Professional. All domain account logon events are audited.

A human resources manager requests that you produce a listing of the times and dates a user named JohnP logged on to the domain. The user was assigned to a client computer named HR09.

You should achieve this objective while reviewing the minimum amount of information. What should you do? (Choose two. Each correct answer presents part of the solution.)

- A. Create a filter that will list all events for the JohnP user account.
- B. Use the Find option to list only the events for the JohnP user account.
- C. Open Event Viewer and access the security log on each domain controller.
- D. Use the Find option to list only the events for the HR09 computer account.
- E. Create a filter that will list only the events for the HR09 computer account.
- F. Log onto HR09 as a local administrator, and open Event Viewer to view the local security log.

Correct Answer: AC

QUESTION 5

Mark works as a Network Administrator for ABC.com. The company has a Windows single domain-based Active Directory network. The network has five Windows member servers and 200 Windows XP Professional client computers. The network has a Windows Server that works as a DNS server. The DNS server contains the following types of resource records: Name Server (NS) resource record A resource record PTR resource record SRV resource record MX resource record

Mark updates the A resource record. Which of the following types of resource records can be associated with the A

resource record and needs to be updated?

- A. The associated PTR resource record needs to be updated.
- B. The associated SRV resource record needs to be updated.
- C. The associated MX resource record needs to be updated.
- D. The associated NS resource record needs to be updated.

Correct Answer: A
