QUESTION 1

You are an Enterprise administrator for ABC.com. All servers on the corporate network run Windows Server and all client computers run Windows XP.

The network contains a server named ABC-SR01 that has Routing and Remote Access service and a modem installed which connects to an external phone line.

A partner company uses a dial-up connection to connect to ABC-SR01 to upload product and inventory information. This connection happens between the hours of 1:00am and 2:00am every morning and uses a domain user account to log on

to ABC-SR01.

You have been asked by the security officer to secure the connection.

How can you ensure that the dial-up connection is initiated only from the partner company and that access is restricted to just ABC-SR01? (Choose three.)

A. Set up the log on hours restriction for the domain user account to restrict the log on to between the hours of 1:00am and 2:00am.

B. Set up a local user account on ABC-SR01. Have the dial-up connection configured to log on with this account.

C. Set up the remote access policy on ABC-SR01 to allow the connection for the specified user account between the hours of 1:00am and 2:00am.

D. Set up the remote access policy with the Verify Caller ID option to only allow calling from the phone number of the partner company modem.

E. Set up the remote access policy to allow access to the domain user account only.

Correct Answer: BCD

QUESTION 2

You are a network administrator for your company. The company network consists of two Active Directory forests. Verigon.com is the single-domain forest that contains all user accounts and resources for the corporate network, except the

resources that are allocated to the Development department. Dev.corp is the single-domain forest that is used only by the Development department. You configure an external trust between the two domains.

Developers must be able to log on from their computers to the verigon.com domain. In the verigon.com forest, you create a new user principal name (UPN) suffix of dev.corp and configure UPNs for the developers\' user accounts in the

verigon.com domain with this suffix. Developers report that they cannot log on to the verigon.com domain from their computers, which belong to the dev.corp domain, by using their UPNs. You must enable developers to log on to the

verigon.com domain from their computers by using UPNs.

What should you do?

A. Replace the external trust with a forest trust.

B. Change the UPN suffix for the developers\\' user accounts to verigon.com.

C. Configure selective authentication on the trust.

D. Configure domain-wide authentication on the trust.

Correct Answer: A

QUESTION 3

The ABC.com network consists of a single Active Directory domain named ABC.com. All computers on the ABC.com network are members of the ABC.com domain.

You install a new server named ABC-CA1 and configure it as a Certification Authority for the ABC.com domain.

How would you enable an Active Directory global group named CA-Admins to issue, revoke and approve certificates without assigning more permissions than necessary?

A. Make the CA-Admins group also members of the Domain Admins group in the domain.

B. Make the CA-Admins group also members of the local Administrators group on ABC-CA1.

C. Grant the CA-Admins group Full Control permission to the Certificated Template container in the Active Directory.

D. Make the CA-Admins group members of the Cert Publishers group in Active Directory.

E. Grant the Certificate Managers role to the CA-Admins group.

Correct Answer: E

QUESTION 4

Your corporate network uses variable length subnetting to make more efficient use of IP addresses. One of the IP addresses for a host is 131.39.161.17 with a subnet mask of 255.255.248.0. What is the proper notation for the network to which this host is connected?

A. 131.39.160.0/21

B. 131.36.161.0/20

C. 131.39.161.17/21

D. 131.36.160.0/20

Correct Answer: A

QUESTION 5

The ABC.com network consists of a single Active Directory domain named ABC.com. All client computers on the

ABC.com network run Windows XP Professional.

You use your client computer named ABC-WS294. You want to use Microsoft Baseline Security Analyzer (MBSA) on ABC-WS294 to analyze network servers for security vulnerabilities.

Which of the following services are the minimum required to be running on the network servers for you to scan them with MBSA? (Choose all that apply.)

A. Remote Registry.

B. Workstation service.

C. Server service.

D. Print Spooler service.

Correct Answer: AC
