### QUESTION 1

You are the security administrator for your company. The company's network supports 500 users. All network server computers run Windows Server. All network client computers run Windows XP Professional. All domain account logon events are audited.

A human resources manager requests that you produce a listing of the times and dates a user named JohnP logged on to the domain. The user was assigned to a client computer named HR09.

You should achieve this objective while reviewing the minimum amount of information. What should you do? (Choose two. Each correct answer presents part of the solution.)

- A. Create a filter that will list all events for the JohnP user account.
- B. Use the Find option to list only the events for the JohnP user account.
- C. Open Event Viewer and access the security log on each domain controller.
- D. Use the Find option to list only the events for the HR09 computer account.
- E. Create a filter that will list only the events for the HR09 computer account.
- F. Log onto HR09 as a local administrator, and open Event Viewer to view the local security log.

Correct Answer: AC

---

### QUESTION 2

The ABC.com network consists of a single Active Directory domain named ABC.com. All servers are configured with Windows Server and all client computers with Windows XP Professional.

At present there are 100 servers in an organizational unit named Terminal Servers, configured to run Terminal Services.

The Terminal Servers host in-house applications. Only ABC.com users with Power Users group membership can run these in-house applications.

A new ABC.com security policy states that the Power Users Group must be empty on all servers.

How would you ensure that the in-house applications will be available to users on the servers when the new security requirement is enabled? (Choose two.)

- A. Set up a GPO in link it to the Terminal Servers OU.
- B. Set up the Compatws.inf security template to allow the Local Users group to run the legacy applications. C. Import the Compatws.inf template into the GPO.
- C. Change the legacy application executable file permissions to allow the Local Users group Full Control permission.
- D. Place the Domain Users group on the Local Administrators group on the Terminal Servers.
- E. Set up the Terminal Servers to run in Application Mode.

F. Set up the Terminal Servers to run in Remote Administration Mode.

Correct Answer: AB

---

### QUESTION 3

Your network is running three DNS servers, NS1, NS2, and NS3. NS1 is running Windows Server, whereas NS2 and NS3 are still running Windows NT 4.0. In reviewing the error log on NS1, you notice an error that lists NOTIMPL(4) being returned by NS3. What does this error indicate?

- A. NS3 does not support extended DNS (EDNS0).
- B. NS1 does not support extended DNS (EDNS0).
- C. The OPT record received from NS3 contained an illegal Time-To-Live.
- D. The OPT record needs to be added to all three name servers.

Correct Answer: A

---

### QUESTION 4

You work as the network administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. The servers at the ABC.com network run Windows Server.

The ABC.com network has a Web server named ABC-SR11. During a routine monitoring you notice an increase in network traffic. Due to this you need to find out the MAC address of the workstation that initiated the transfers and the

command that was used. However, your action must not affect ABC-SR11.

What actions must you take?

- A. You must run the ipconfig/registerdns.
- B. You must use the Netmon utility.
- C. You must capture the IP traffic to ABC-SR11.
- D. You must Enable Server Message Block (SMB) signing on all the workstations.

Correct Answer: C

---

### QUESTION 5

You are the administrator for your company's network. Your company's logical network design consists of a single Active Directory domain. All servers have the Windows Server operating system installed. All client computers run Windows

XP Professional.

Woody is the manager for the company. He uses his client computer to read and edit large documents from the

publishing department. The computer is configured with a single basic disk consisting of two partitions. One partition is used as

the boot and system partition. The other partition hosts user data folders. Both partitions are formatted using NTFS. The user data partition contains shared folders and files that use both share and NTFS permissions to grant access to

employees in the editorial department.

Woody informs you that his computer is beginning to perform at a speed that is moderately slower than other client computers in the editorial department. You use System Monitor and discover that a disk bottleneck exists.

How can Woody improve performance on this computer?

- A. Defragment the hard disk.
- B. Reformat the data partition using FAT32.
- C. Convert the hard disk to a dynamic disk.
- D. Delete the two existing partitions on the hard disk, and create a single partition.

Correct Answer: A
