QUESTION 1

The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the ABC.com network run Windows Server Enterprise Edition and all client computers run Windows XP Professional. ABC.com has its headquarters in Chicago and a branch office in Dallas.

The Chicago and Dallas offices are connected by permanent leased line connection with a hardware router at each end of the connection.

Currently all client computers in both offices receive their IP configurations from a single Windows Server 2003 server located in the Chicago office.

You are designing a new DHCP architecture to improve the performance and reliability of the system.

How would you ensure that DHCP services will continue to function in the event of a failure of any single component? (Choose two.)

- A. Set up two Windows Server computers as a DHCP server cluster in the Chicago office.
- B. Install two Windows Server computers as a DHCP server cluster in the Dallas office.
- C. Configure a Windows Server computer at the Dallas office as a DHCP relay agent.
- D. Install a Windows Server computer as an additional DHCP server in the Dallas office.
- E. Set up a Windows Server 2003 computer at the Chicago office as a DHCP relay agent.
- F. Configure one DHCP server to handle 75 percent of the IP address scope and the other DHCP server to handle 25 percent.

Correct Answer: AB

QUESTION 2

You work as the network administrator at ABC.com. The ABC.com network has a domain named ABC.com. The servers at the ABC.com network run Windows Server and the workstations, Windows XP Professional.

The ABC.com network has two servers, named ABC-SR30 and ABC-SR31, which contain file with sensitive company information. You create a new OU named SenSrv and move ABC-SR30 and ABC-SR31 to the new OU. You then create a

new GPO that and configure it to encrypt all network connections. You then link the GPO to the SenSrv OU.

How would you check to see if encrypted connections to ABC-SR30 and ABC-SR31 are taking place?

- A. By opening the Resultant Set of Policy console.
- B. By running the Microsoft Baseline Security Analyzer (MBSA).
- C. By applying the hisecdc.inf predefined security template.
- D. By opening the IP Security Monitor console.

Correct Answer: D

QUESTION 3

You are the security administrator for your company. The company's network supports 500 users. All network server computers run Windows Server. All network client computers run Windows XP Professional. All domain account logon events are audited.

A human resources manager requests that you produce a listing of the times and dates a user named JohnP logged on to the domain. The user was assigned to a client computer named HR09.

You should achieve this objective while reviewing the minimum amount of information. What should you do? (Choose two. Each correct answer presents part of the solution.)

- A. Create a filter that will list all events for the JohnP user account.
- B. Use the Find option to list only the events for the JohnP user account.
- C. Open Event Viewer and access the security log on each domain controller.
- D. Use the Find option to list only the events for the HR09 computer account.
- E. Create a filter that will list only the events for the HR09 computer account.
- F. Log onto HR09 as a local administrator, and open Event Viewer to view the local security log.

Correct Answer: AC

QUESTION 4

You work as the network administrator at ABC.com. The ABC.com network has a domain named ABC.com. The servers at the ABC.com network run Windows Server. ABC.com has a subsidiary named Test Labs, Inc. that has a domain named testlabs.com.

The ABC.com network has a DNS server named ABC-SR05. ABC-SR05 acts as a secondary zone for testlabs.com

What actions must you take to track when the DNS server at Test Labs, Inc. sends notifications of modifications in the zone of testlabs.com to ABC-SR05?

- A. You must run the gpresult command in verbose mode.
- B. You must select debug logging and set the log to store Notification events on ABC- SR05.
- C. You must run the secdit command in analysis mode.
- D. You must configure a two-way initiated demand-dial connection.

Correct Answer: B

QUESTION 5

Your firm is designing a new software driver that will employ a proprietary method of flow control for data being sent across a network medium. On which layer of the OSI model would be this flow control likely be implemented?

- A. Application
- B. Data Link
- C. Transport
- D. Media Access Control

Correct Answer: B
