QUESTION 1

A five-year-old child has been recentlydiagnosed with ADHD after demonstrating shortfalls in at least two important areas. Deficits can be observed at home, in the classroom, and in group actMties. Which of the following would not be a symptom of ADHD?

A. Difficulty focusing

B. Memory loss

C. Boredom

D. Defiance

Correct Answer: D

Children identified as suffering from ADHD do not intentionally display defiant behaviors. They become more of a distraction to others and fail to complete tasks due to an inability to focus.

QUESTION 2

An MSW graduate in Social Work can provide treatmentwithout a state license.

A. True

B. False

Correct Answer: B

False. In this case it is about more than just the degree. You must also have experience and supervision fora minimum of4000 hours, plus pass the clinical exam.

QUESTION 3

A clinical social worker was observed accepting money from an attorney for a copy of a client\\'s record. The colleague who witnessed the event discussed the matter with the professional, and efforts are being made to resolve the problem. The actions that took place in regards to the client\\'s records fall under what category?

A. Privacy

B. Unethical conduct

C. Confidentiality

D. All of the above

Correct Answer: D

All clinical social workers need to take appropriate measures to expose, prevent, discourage or correct unethical conduct by fellow colleagues. They are under obligation to not share client information without a signed informed consent. According to HIPAA, all clients have a legal right to their privacy.

QUESTION 4

The American Foundation for Suicide Prevention states that up to 50% of all people who commit suicide have had failed past attempts. Traumatic life events that cause a significant amount of stress and clinical depression are known to be major risk factors behind for suicide. Which of the following is not likelyto be a risk factor for suicide?

A. Family history of mental disorder

B. Incarceration

C. Chronic physical illness

D. Family diversity

Correct Answer: D

Research shows that 90% of all suicides were by indMduals suffering from clinical depression or other mental disorders. Substance abuse is usually an additional factor to an already unstable diagnosis. Warning signs that someone is contemplating suicide may include: risk-taking behavior, talking about death, changing a will, and losing interest in things one cares about. Family diversity has not been shown to be a significant issue related to suicide.

QUESTION 5

A clinical social worker is helping a client named Beth with phobia issues that surface when she is in dark places. The problem has occurred since the client was young, and she sleeps with every light on in her home. Nlost nights, Beth dozes on the couch, and the lack of sleep is interfering with her home and social life. Which of the following approaches would be most effective in combating Beth\\'s anxiety issues?

A. Self-actualization

B. Systematic desensitization

C. Cognitive behavioral therapy

D. Family therapy

Correct Answer: B

Systematic desensitization educates a person to overcome an avoidance pattern. It helps effectively with phobias and anxiety by exposing the client to the fear gradually until it can be tolerated.
