QUESTION 1

You want to move static content deploy to the build phase of deployments.

Which two actions do you take? (Choose two.)

A. Download and commit app/etc/config.php from production

B. Run ece-tools scd-deploy:set build on production

C. Run ece-tools config:dump on production

D. Use scp to copy app/etc/config.php from local to production

Correct Answer: BD

QUESTION 2

You are testing an integration to an external service that requires you to configure an access key in an environment variable. You created a new environment to validate the functionality. The variable must only impact this environment.

How do you configure the variable?

A. Use the magento-cloud CLI utility with the environment, inheritable and level flags

B. Add the variable to the variables section under Project Settings specifying inheritance level

C. Add the variable to the .magento.env.yaml file specifying the environment and inheritable

D. Use vendor/bin/ece-tools to generate a local config.php file and commit the setting

Correct Answer: C

Reference: https://devdocs.magento.com/cloud/env/variables-deploy.html

QUESTION 3

You want to improve the ability to monitor Production deployments by setting up an email notification system.

How do you achieve this?

A. Enable Deployment Notifications under Configure Environment > Settings in the Project Web UI

B. Build a custom module which hooks into the deployment phase and sends emails in real-time

C. Configure log notifications in the .magento.env.yaml file

D. Use the magento-cloud environment:deploy:email command to enable email notifications

Correct Answer: C

Reference: https://devdocs.magento.com/cloud/env/setup-notifications.html

QUESTION 4

You are reviewing a third party extension for Magento Commerce Cloud compatibility.

Which pattern makes a module incompatible with Magento Commerce Cloud?

A. Direct instantiation by the ObjectManager of non-generated classes in .phtml template files

B. Direct instantiation by the ObjectManager in non-constructor methods with the class also being referenced in the constructor signature

C. Configuration referencing generated Proxy classes in the modules etc/frontend/di.xml file

D. Direct instantiation of generated classes by the ObjectManager without the class being referenced in the constructor

Correct Answer: B

QUESTION 5

To secure composer credentials you want to remove the auth.json file from the project repository. How do you do that?

A. The build phase runs on a separate server and variables are not available there, you must keep the credentials in the auth.json file, but you can replace the password with its hash

B. Add the env:COMPOSER_AUTH variable on the project level and make it visible on the build phase

C. Put the composer credentials into /mnt/build/.config/composer/auth.json

D. Add the COMPOSER_AUTH variable with the sensitive option enabled

Correct Answer: A
