QUESTION 2

A company uses Dynamics 365 Finance.

You are performing a code review for several segments of code that use the Boolean data type.

You need to validate the segments for the correct X++ structure.

Which two code statements will compile? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. `boolean exprValue; exprValue = (8*6 == 48);`

B. `boolean exprValue = (8*6 == '48') ? Yes:No;`

C. `boolean exprValue; exprValue = (8*6 == 48) ? 1:0;`

D. `boolean exprValue = (8*6 == '48') ? false:true;`

Correct Answer: AC

A: Example:

```
// Declares a boolean called exprValue. boolean exprValue;
```

```
// Assigns ExprValue the value of (7*6 == 42), which equates to true.
```

```
exprValue = (7*6 == 42);
```

Incorrect:

Not B, not D: Data type mismatch in 8*6 == '48'
