QUESTION 1

HOTSPOT

A food production company is implementing Dynamics 365 Supply Chain Management.

The company must run production for salad kits that do not contain nut allergens first, and salad kits that do contain nut allergens second to avoid cross contamination. The salad kits create by-products.

You need to identify business process steps to ensure that production orders for salad kits that are free of nut allergens are produced first.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement

Set up raw materials for finished goods.

Configure the batch sequence.

Enable the sequence planned orders parameter.

Configuration

	▼
BOM Version	
Formula	
BOM	
Product configurator	

	▼
Route group	
Sequence group	
Operation	
Reservation Sequence	

	▼
Master planning	
Production	
Operation	
Route	

Correct Answer:

Answer Area

Requirement

Set up raw materials for finished goods.

Configuration

	▼
BOM Version	
Formula	
BOM	
Product configurator	

Configure the batch sequence.

	▼
Route group	
Sequence group	
Operation	
Reservation Sequence	

Enable the sequence planned orders parameter.

	▼
Master planning	
Production	
Operation	
Route	

Box 1: Formula Set up raw materials for finished goods

Formulas, though conceptually similar to BOMs, have a few key distinctions. A few of these differences are outlined below:

1.

Unlike BOMs, Formulas are generally used by process manufacturers

2.

Formulas are commonly used in Batch order rather than Production orders

3.

Instead of consisting of “components”, Formulas more often combine different measurements of certain “ingredients”

4.

Since these ingredients are combined, items that are created from a formula cannot easily be broken down into the original ingredients

5.

Depending on other factors (order size, raw materials available, etc.), a formula can be scaled up or scaled down

6.

Formulas allow the use of co-products and by-products

7.

Formula lines can be allocated on a percentage basis vs designated quantities

8.

Formulas permit the utilization of catch weight items

What defines an item created from a formula is that each of the ingredients are fully consumed and transformed into a new item. You cannot break an item that is created from a formula back into its original components. Think of using a formula for a production item like following a recipe to bake a cake. Once the ingredients are combined and the cake is baked, it would be very difficult to break the cake back down into flour, eggs, sugar, etc. The same goes for companies that use formulas to produce items such as paper or plastic.

Incorrect:

* BOM

In the simplest terms, a BOM is a list of components (such as raw materials and sub-assemblies) required to produce a finished good. Items created from a BOM can usually be disassembled into the original components; generally, these

items are not consumed or transformed in the production process. For this reason, BOMs are more common among discrete manufacturers than process manufacturers. Some examples of items that might be created from BOMs are chairs,

desks, and manufacturing equipment. A BOM for a desk might look like:

4 legs 1 table top 4 drawers 18 screws

Box 2: Sequence group Configure the batch sequence

About batch order sequencing You can use batch order sequencing to define sequences that you can assign to items. A sequence is an item characteristic that is used to sort items in groups so that the items with similar characteristics are scheduled for production together.

You can perform the following tasks for batch order sequencing:

*

Create a sequence group and assign sequences to the sequence group.

*

Assign a sequence group to an operation resource or resource group.

*

Etc.

Note: Set up sequence groups Use this procedure to create sequence groups that are used to schedule production. You can assign sequences to a sequence group and then rank these sequences in the order of preference. For example, in the paint industry, color-based paints can have color properties and other attributes, such as latex or enamel. You can create a sequence that contains values for colors that are ranked according to preference in which these colors are ordered or sorted. You can create another sequence that contains values for the type of paint, so that latex is preferred to enamel. You can then assign these sequences to a sequence group, and then rank the sequences so that all the colors that are available for a specified type of paint are sequenced, or all the types of paint that are available for a specified paint are sequenced, according to the ranks of the sequences in the sequence group.

Box 3: Master planning Enable the sequence planned orders parameter

Master plans overview Sequencing Sequencing enables planned orders to be arranged based on sequencing attributes that are associated with the finished product. It's often used to prepare production orders for packaging. For example, it can be used to pack boxes in a specific sequence, based on color and size.

By setting the Sequencing option to Yes, you can specify how far in the future the operations or jobs should be sequenced. Keep in mind that the longer the time fence is, the longer it will take for master planning to run.

QUESTION 2

DRAG DROP

A professional services company is implementing Dynamics 365 Finance. The company has the following business entities:

Company	Comments
CompanyA	This is a company that reports on behalf of all organizational units.
OperationsB	This is a transactional company that operates with their own tax ID.
OperationsC	This is a regional business unit within OperationsB.
OperationsD	This is a transactional company that operates with their own tax ID.

You need to configure the system to support this organizational structure.

How should you configure the organization? To answer, drag the appropriate configurations to the correct entities. Each configuration may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll.

to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Configurations

Legal entity
Financial dimension
Legal entity for elimination
Legal entity for consolidation

Answer Area

Entity

CompanyA

OperationsC

Configuration

Configuration

Configuration

Correct Answer:

Configurations

Financial dimension
Legal entity for consolidation

Answer Area

Entity

CompanyA

OperationsC

Configuration

Legal entity

Legal entity for elimination

Box 1: Legal entity

Box 2: Legal entity for elimination

Elimination transactions are required when a parent legal entity does business with one or more subsidiary legal entities and uses consolidated financial reporting. Consolidated financial statements must include only transactions that occur

between the consolidated organization and other entities outside that organizations. Therefore, transactions between legal entities that are part of the same organization must be removed, or eliminated, from the general ledger, so they don't

appear on financial reports. There are multiple ways to report about eliminations:

An elimination rule can be created and processed in a consolidation or elimination company.

Financial reporting can be used to show the eliminations accounts and dimensions on a specific row or column.

A separate legal entity can be used to post manual transaction entries to track eliminations.

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company implements Dynamics 365 Finance.

Forms and reports take longer than usual to open and run in the production environment.

You need to investigate the performance issue by using SQL Insights in Lifecycle Services (LCS).

Solution: Check for blocked queries and high DTU.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

Reference: <https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/lifecycle-services/performance-troubleshooting>

QUESTION 4

HOTSPOT

You need to plan for the meetings with Microsoft.

Which actions should you complete for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Microsoft meeting project steps required

Requirement

The project plan must include meetings with FastTrack.

	▼
Schedule workshops.	
Schedule milestone reviews.	
Schedule steering committee meetings.	
Schedule best practice check point reviews.	

Schedule as an input to the meetings.

	▼
Determine all project risks.	
Capture required information.	
Capture all time billed to date.	
Complete project status assessment.	

Schedule as an output to the meetings.

	▼
Review risks and recommendations.	
Consolidate and publish meeting notes.	
Update traceability matrix and project risks.	
Fill in the responsible, accountable, consulted, and informed (RACI) matrix.	

Correct Answer:

Microsoft meeting project steps required

Requirement

The project plan must include meetings with FastTrack.

	▼
Schedule workshops.	
Schedule milestone reviews.	
Schedule steering committee meetings.	
Schedule best practice check point reviews.	

Schedule as an input to the meetings.

	▼
Determine all project risks.	
Capture required information.	
Capture all time billed to date.	
Complete project status assessment.	

Schedule as an output to the meetings.

	▼
Review risks and recommendations.	
Consolidate and publish meeting notes.	
Update traceability matrix and project risks.	
Fill in the responsible, accountable, consulted, and informed (RACI) matrix.	

Box 1: Schedule workshops

The project plan must include meetings with FastTrack.

FastTrack for Dynamics 365, Implementation workshops to provide guidance for solutions

Implementation workshops provide timely guidance across the functional, technical, and implementation aspects of the solution.

Box 2: Capture required information

Schedule as input to the meetings.

Note: How is the FastTrack program delivered, and what is the standard engagement length?

The program is delivered jointly by Microsoft engineering and a qualified implementation partner. Using a framework called Success by Design, the program provides prescriptive guidance, workshops, and readiness reviews for designing,

building, and deploying a Dynamics 365 solution. The engagement time is generally 9 to 18 months, but varies based on your needs.

How is the FastTrack program different from Microsoft Consulting Services?

Microsoft Consulting Services provides services via paid engagements. FastTrack for Dynamics 365 is a no-cost advisory service that's delivered in conjunction with a qualified implementation partner. The program is focused on helping

customers accelerate Dynamics 365 implementations and go live with confidence.

What can I expect from the program?

You'll get access to self-serve resources, workshops, and checkpoints, such as solution blueprint and go-live readiness reviews, to accelerate your Dynamics 365 implementations and mitigate risk.

Incorrect:

* Determine project risk

Box 3: Review risks and recommendation Schedule as output to the meetings.

QUESTION 5

HOTSPOT

A company is implementing the vendor collaboration functionality in Dynamics 365 Chain Management.

A vendor's external user must be able to access the vendor portal and create new users. The external user must be able to create new users only for the vendor's organization.

You need to set up the solution to meet the requirements.

How should you set up the solution? To answer, select the appropriate options in the answer area.

Hot Area:

Allow portal access for vendor users.

	▼
Grant full Azure Active Directory access	
Create employee records	
Create new worker records	
Provision the vendor users	

Grant access to create new users.

	▼
Initiate a workflow	
Grant full Azure Active Directory access	
Configure rules to enforce separation of duties	
Assign the contacts to the vendor	

Correct Answer:

Allow portal access for vendor users.

Grant full Azure Active Directory access
Create employee records
Create new worker records
Provision the vendor users

Grant access to create new users.

Initiate a workflow
Grant full Azure Active Directory access
Configure rules to enforce separation of duties
Assign the contacts to the vendor

Box 1: Provision the vendor users

Box 2: Initiate a workflow

Set up workflows to process vendor collaboration user requests To help guarantee that all the relevant tasks are completed, and that the appropriate approvals are given, you must set up workflows to handle vendor collaboration user requests.

Vendor collaboration user requests are submitted either by external vendors that have the Vendor admin (external) security role or similar permissions, or by procurement professionals in your company. They can also be generated from prospective vendor registration requests during the vendor onboarding process.

There are three types of requests:

Requests to provision a new user

Requests to inactivate an existing user

Requests to modify the security roles of an existing user

You must create two or more workflows to process all three types of vendor collaboration user requests.
