QUESTION 1

You are a consultant for Proseware, Inc.

You need to audit the system based on government financial compliance standards in Objective 2.

What should you use?

A. Compare permissions

B. Segregation of duties

C. Role to user assignments report

D. User role assignments report

E. Security diagnostic for task recording

Correct Answer: D

Scenario: Objective 2. Audit the security roles for users in the manufacturing division.

Out-of-box security reports

User role assignments The User role assignments report generates a view of the current user role assignments in your system. By default, the report includes all users with roles assigned. You can optionally limit the report to a specific set of users by entering a list of users when generating the report. On the User role assignments parameters pane, go to Records to include > Filter. From here you can add or remove filters to the list of users the report will be generated for.

Note: Finance and operations provides a set of rich security reports to help you understand the set of security roles running in your environment and the set of users assigned to each role. In addition to the reports noted in this article, developers can generate a workbook containing all user security privileges for all roles using Visual Studio > Dynamics 365 > Addins > View related objects and licenses for all roles.

Each of the security reports can be found under System administration > Inquiries > Security.

QUESTION 2

You are a solution architect for a company that uses Dynamics 365 finance and operations apps.

The company does not have a centralized reporting strategy.

You create a solution design document. The out-of-the-box reports and workspaces do not meet the company\'s reporting needs.

The company needs to use available Power BI dashboards to report against Dynamics 36S data. You need to recommend a data source to use for the Power BI reports

What should you recommend?

A. Azure Data Lake database

B. Microsoft Dataverse

C. Transactional database

D. Entity store database

E. Bring your own database (BYOD)

Correct Answer: D

Entity store is the operational data warehouse. Entity store provides built-in integration of operational reports with Power BI. Ready-made reports and analytical workspaces use Entity store. If you write Power BI reports by using data in your

application environment, you should use Entity store.

Incorrect:

Not E: The BYOD feature is recommended for the following scenarios:

You must export data into your own data warehouse.

You use analytical tools other than Power BI, and those tools require T-SQL access to data.

You must perform batch integration with other systems.

QUESTION 3

A holding company with three independently managed and operated subsidiaries is implementing Dynamics 365 Finance.

The company needs to ensure the restriction of data for each company from subsidiary counterparts. You need to determine an organization structure.

Which structure should you recommend?

A. single legal entity with security policies

B. separate legal entities

C. single legal entity with custom business unit financial dimension

D. single entity that consolidates legal entities

E. single legal entity with default business unit financial dimension

Correct Answer: B

QUESTION 4

A manufacturing company has multiple factories and distribution centers in remote areas where they have poor internet connectivity. The company is planning to implement Dynamics 365 Supply Chain Management.

The company\'s main priorities are uninterrupted factory and distribution center operations, master data management financial global reporting, and integration with analytics tools.

You need to design the infrastructure.

Solution: Implement the manufacturing factories\' operations and distribution center operations on-premises and the center data repository in the cloud.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 5

HOTSPOT

A company implements Dynamics 365 finance and operations apps for its retail operations.

Unauthorized vendor checks have been created in the past resulting in check fraud.

The company must print a vendor aging report from a local printer in its headquarters location every week on Sunday night.

Every week on Monday, the comptroller must review the report and approve checks to issue to vendors.

You need to recommend a solution to meet the requirements.

What should you recommend? To answer, select the appropriate options in the answer area.
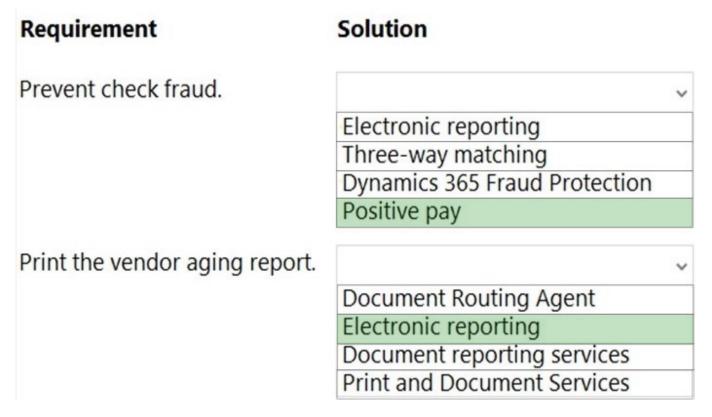

NOTE: Each correct selection is worth one point.

Hot Area:

Requirement	Solution
Prevent check fraud.	▾
	Electronic reporting
	Three-way matching
	Dynamics 365 Fraud Protection
	Positive pay
Print the vendor aging report.	▾
	Document Routing Agent
	Electronic reporting
	Document reporting services
	Print and Document Services

Correct Answer:

Requirement	Solution
Prevent check fraud.	▾
	Electronic reporting
	Three-way matching
	Dynamics 365 Fraud Protection
	Positive pay
Print the vendor aging report.	▾
	Document Routing Agent
	Electronic reporting
	Document reporting services
	Print and Document Services

Box 1: Positive Pay

Positive Pay within Dynamics AX is one of the easiest systems to put into place to help prevent check fraud and protect your business. Positive Pay generates an electronic file that you can submit to your bank with a list of your approved

checks, reducing the chance of processing any fraudulent checks.

Box 2: Electronic reporting

Electronic reporting (ER) is a configurable tool that helps you create and maintain regulatory electronic reporting and payments.

You can use ER to configure formats for both incoming and outgoing electronic documents in accordance with the legal requirements of various countries and regions. ER lets you manage these formats during their lifecycle. For example, you

can adopt new regulatory requirements and generate business documents in the required format to electronically exchange information with government bodies, banks, and other parties.

The ER engine is targeted at business users instead of developers. Because you configure formats instead of code, the processes for creating and adjusting formats for electronic documents are faster and easier.
